Server cabinets ITK® by ZPAS for data centers

NEW

- Robust construction
- Multifunctionality
- Safety
- Efficiency

ITK provides a new series of telecommunications cabinets ITK® by ZPAS, developed in collaboration with one of European leaders in passive telecommunications equipment production industry – ZPAS company.

A new series of cabinets for data centers (DC) ITK® by ZPAS is designed based on innovative developments and adapted for the Russian market.

Telecommunication cabinets ITK® by ZPAS are manufactured on IEK GROUP plant in Yasnogorsk (the Tula Region).

System Warranty

The ITK structured cable system offers an extended 25 years warranty supporting existing and prospective applications and services.

System warranty provides complete compatibility of all components, maximum functionality of cable system, as well as excludes design and installation errors.

System warranty for SCS is required to implement any project on construction of a structured cable system, ensuring efficient and resilient operation of the enterprise network infrastructure.

ITK® is a well-known Russian brand of telecommunications equipment, providing reliable products for IT market. ITK trademark belongs to one of the largest manufacturers on electrical market of Russia – IEK GROUP. Nowadays ITK® equipment is used in a lot of upmarket projects and continues to participate in programs for IT systems reconstruction and upgrade of the largest Russian and foreign organizations.

ITK MISSION

High quality products supporting efficient telecommunications solutions and provision of cutting edge equipment under Russian TM.

DISTRIBUTION AND PROMOTION

ITK® telecommunications equipment is promoted on the market via a broad distribution partners network. ITK® products is supplied to leading players of IT market – system integrators and large corporate clients.

LOGISTICS

There are 4 logistics centers in Russia, two of which are assigned with class "A" according to international classification of warehouse premises. The centers are fitted with state of the art equipment, their total area is about 60 thousand sq. m. There are also distribution centers abroad: in Almaty (Kazakhstan), Kyiv (Ukraine), Kishinev (Moldova), Riga (Latvia), Ulaanbaatar (Mongolia) and Ningbo (China). ITK® products undergo mandatory additional incoming quality control in all logistics centers.

PRODUCTION

Strategic production facility is located in Russia, Tula Region. Cutting edge equipment of the production site is used to manufacture telecommunications cabinets and climate cases, metal trays and accessories for them, as well as trunk and office plastic cable ducts, meeting the highest European and Russian standards. A part of ITK® products is manufactured under the contract on partner plants in European and Asian countries.

QUALITY AND WARRANTY

All ITK® products meet requirements of international standard ISO 11801:2017, Russian GOSTs for structured cable and low-current systems, as well as American standard TIA568-D. Three-stage product quality control provides extended component warranty. A certification program for ITK® structured cable systems (system warranty) includes guaranteed support of existing and prospective applications for a period of 25 years.

DESIGN AND ENGINEERING SUPPORT

High qualification and expertise resulting from implementation of structured cable systems projects of any complexity allow to offer our partners and customers designing and engineering support, perform tasks on equipment selection and assessment of selected project solutions and execute audits of finished works. Technical workshops, online courses and webinars, as well as a network of ITK® training centers help improve qualification of professionals, working on SCS design.

Telecommunications cabinets and racks

- Server cabinets with static load 1500 kg
- Network on-floor and wall-mounted cabinets
- Outdoors climate cases IP55 NF 1
- Broad range of accessories and gear

ITK telecommunications cabinets and racks offer a reliable solution for compact arrangement of 19-inch active switching and network equipment, including cooling, electric power distribution inside, provision of integrity and security, protection against environmental impact, meeting Russia and international standards, as well as TR CU requirements.

Cabinets, racks and accessories for them are manufactured on proprietary production plant of IEK GROUP in Yasnogorsk, Tula Region, using state of the art European metal working equipment with application of high-grade metal and raw materials. Each year our enterprise produces **up to 1.2M metal cabinets and outer jackets.**

Network on-floor cabinets

ITK on-floor 19" cabinets are used to allocate various active and passive network equipment, servers, DSS, rack UPS and other specialized 19" standard equipment. They can be allocated both in specialized server and cross-connect rooms and in office premises, combining high performance, appealing design, high lifting capacity and functionality. A broad range of form factors and modifications of network cabinets, as well as a large quantity of accessories and gear allow a customer to find a required specification depending on a task. Moreover, correspondence to international and Russian standards ensures compatibility with SCS components and equipment of global manufacturers.

Key Concepts

19 inches (19")

width between two vertical mounting guides of the cabinet (between two square holes). 19" = 482.6 mm

Unit (U)

usable height unit of a telecommunications cabinet. 1U = 1.75" = 44.45 mm.

Usable depth of a cabinet

Maximum distance between a front and a rare assembly plane, constituted by two 19" assembly profiles, moved to the farthest position in the cabinet. This parameter defines maximum possible depth and dimensions of active equipment and servers installed inside of a cabinet.

Perforation percentage of a door

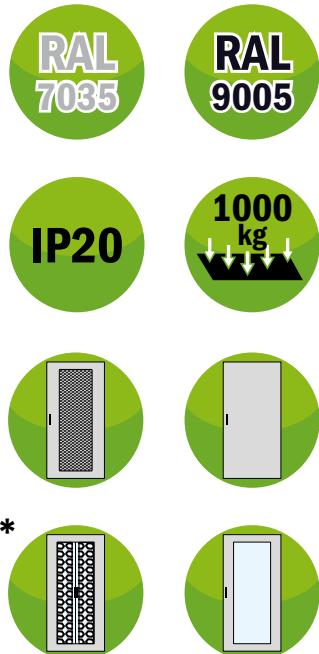

Percentage of an open door area, ensuring natural ventilation and passage of air streams to a cabinet through a door. The value is calculated based only on the part of a door area, which has holes in a form of regular hexagon or a circle.

Types of doors**Glass****Metal****Perforated****Two-leaf perforated**

LINEA N series cabinets

Due to their enhanced structure, that is able to withstand a distributed static load of 1000 kg, LINEA N series cabinets are designed for allocation of a lot of heavy telecommunications equipment of different depth, uninterrupted power supply units and batteries. Cabinets of this series provide the equipment with efficient heat exchange and protection against unauthorized access, offering a broad range of cable arrangement options.

LINEA N cabinets can be installed in the following premises: data centers, all kinds of server rooms, cross-connect buildings, office spaces and premises of large business centers.

* for a cabinet 800x800 mm"

Joint installation on legs and rollers	yes						
Other							
Standard compliance	IEC62208, IEC60950, TR CU 020/2011, GOST 28601.1-90 and 28601.2-90, GOST 14254						
Operation conditions according to GOST 15150	U3 (in closed premises at a temperature from -10 to +45°C and a relative humidity of up to 80% at 25°C)						
Ingress protection level according to GOST 14254	IP20 IP00 – cabinets with perforated doors						
Physical impact protection level according to GOST IEC 62262	IK10 IK08 – glass door						
Color	RAL7035 (grey) / RAL9005 (black)						
Cover type	PPP shagreen matte / PPP shagreen moire						
Warranty	3 years						
Service life	25 years						
Packaging	4 corrugated boxes in a wooden grillage						

Construction features

-  Static load 1000 kg
-  The door can be re-hung easily and quickly
-  Ventilated door has 80% of perforation
-  G-shaped form of 19" mounting profiles
-  The cabinet can be simultaneously mounted on the rollers and on adjustable legs
-  19" mounting profiles are adjusted per depth and have a numerical height labeling in units
-  Delivered in a reliable and durable wooden grillage
-  Internal space of the cabinet can be accessed from four sides
-  Climatic version of U3
-  Side walls are removable, fitted with a lock and latches
-  3 years warranty
-  Service life – 25 years

LINEA N cabinets 600×600 mm and 600×800 mm

Dual roof ensures more efficient cooling of equipment and prevents dust from getting into the cabinet from the top

The cabinet can be accessed from four sides, including from the rear side

Locks and plastic latches on removable side walls

Locks on side walls are sunk, allowing to put the cabinets in a row with no clearances

Glazed door with tinted shock-proof glass with protective film

Cabinet frame and 19" mounting profiles have a high fixity degree, ensuring 1000 kg static load

Delivery in a reliable durable wooden package

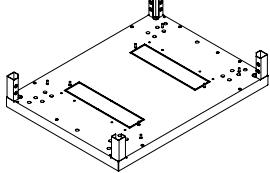

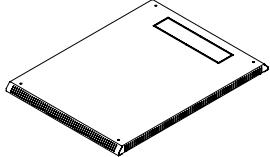

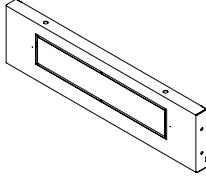

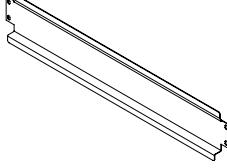

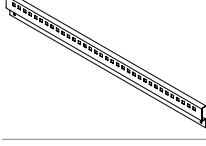

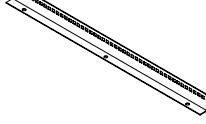

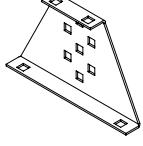

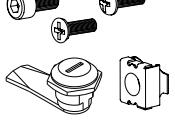

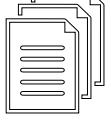

Can be simultaneously installed on legs and rotating rollers

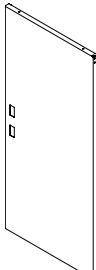

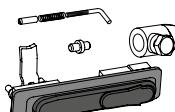

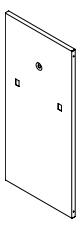

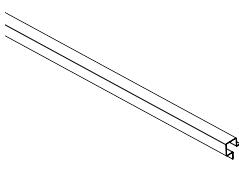

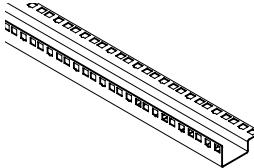

LINEA N cabinets 600×600 mm and 600×800 mm

LINEA S Server Cabinets

ITK SERVER CABINETS ARE PRESENTED IN LINEA S SERIES AND ARE DESIGNED TO ALLOCATE HEAVY TELECOMMUNICATION EQUIPMENT AND SERVERS IN LIMITED MOUNTED SPACE. CABINETS OF THIS SERIES CAN BE USED AS A STANDALONE COMPLETE SOLUTION IN SMALL SERVER ROOMS AND AS A PART OF DATA CENTERS (DC).

DEU TO INCREASED DEPTH AND ENHANCED FRAMEWORK CONSTRUCTION STATIC LOAD CAPACITY OF A CABINET REACHES 1500 KG. LINEA S CABINETS PROVIDE GREAT NATURAL COOLING BY HIGHLY PERFORATED DOORS AND ALLOW TO ORGANIZE ADDITIONAL FORCED COOLING, IN ORDER TO PREVENT OVERHEATING OF THE INSTALLED EQUIPMENT. ITK SERVER CABINETS EFFICIENTLY SOLVE A TASK OF CONVENIENT QUICK MOUNTING AND MAINTENANCE, PROTECTION AGAINST UNAUTHORIZED ACCESS, MONITORING AND ELECTRIC POWER DISTRIBUTION. THE CABINET CAN BE ACCESSED FROM FOUR SIDES, CABLES CAN BE INSERTED VIA ENTRIES ON THE ROOF AND ON THE BASE.

ITK OFFERS A GREAT RANGE OF COMPONENTS, ACCESSORIES AND FITTINGS FOR LINEA S CABINETS, MEETING RUSSIAN AND INTERNATIONAL STANDARDS, ALLOWING CUSTOMERS NOT ONLY TO GET A HIGH QUALITY SERVER CABINET, BUT TO INSTALL A COMPLETE RELIABLE SOLUTION FOR ANY TASK AT IT INFRASTRUCTURE ORGANIZATION.

Standard compliance	IEC62208, IEC60950, TR CU 020/2011, GOST 28601.1-90 and 28601.2-90			
Operation conditions according to GOST 15150	NF 4.2 (in closed premises at a temperature from -5 to +40°C and a relative humidity of up to 80% at 25°C)			
Ingress protection level according to GOST 14254	IP00			
Physical impact protection level according to GOST IEC 62262	IK10			
Color	RAL7035 (grey) / RAL9005 (black)			
Cover type	PPP shagreen			
Warranty	3 years			
Service life	25 years			
Packaging	3 corrugated cardboard boxes			

Construction features

Construction type: pre-fabricated

The door can be re-hung easily and quickly

Static load 1500 kg

Ventilated door has 80% of perforation

Broad range of versions and dimensions

Quick installation

G-shaped form of 19" mounting profiles

Compliance with Russian and international standards

Internal space of the cabinet can be accessed from four sides

Flat compact package

Side walls are removable, fitted with a lock and latches

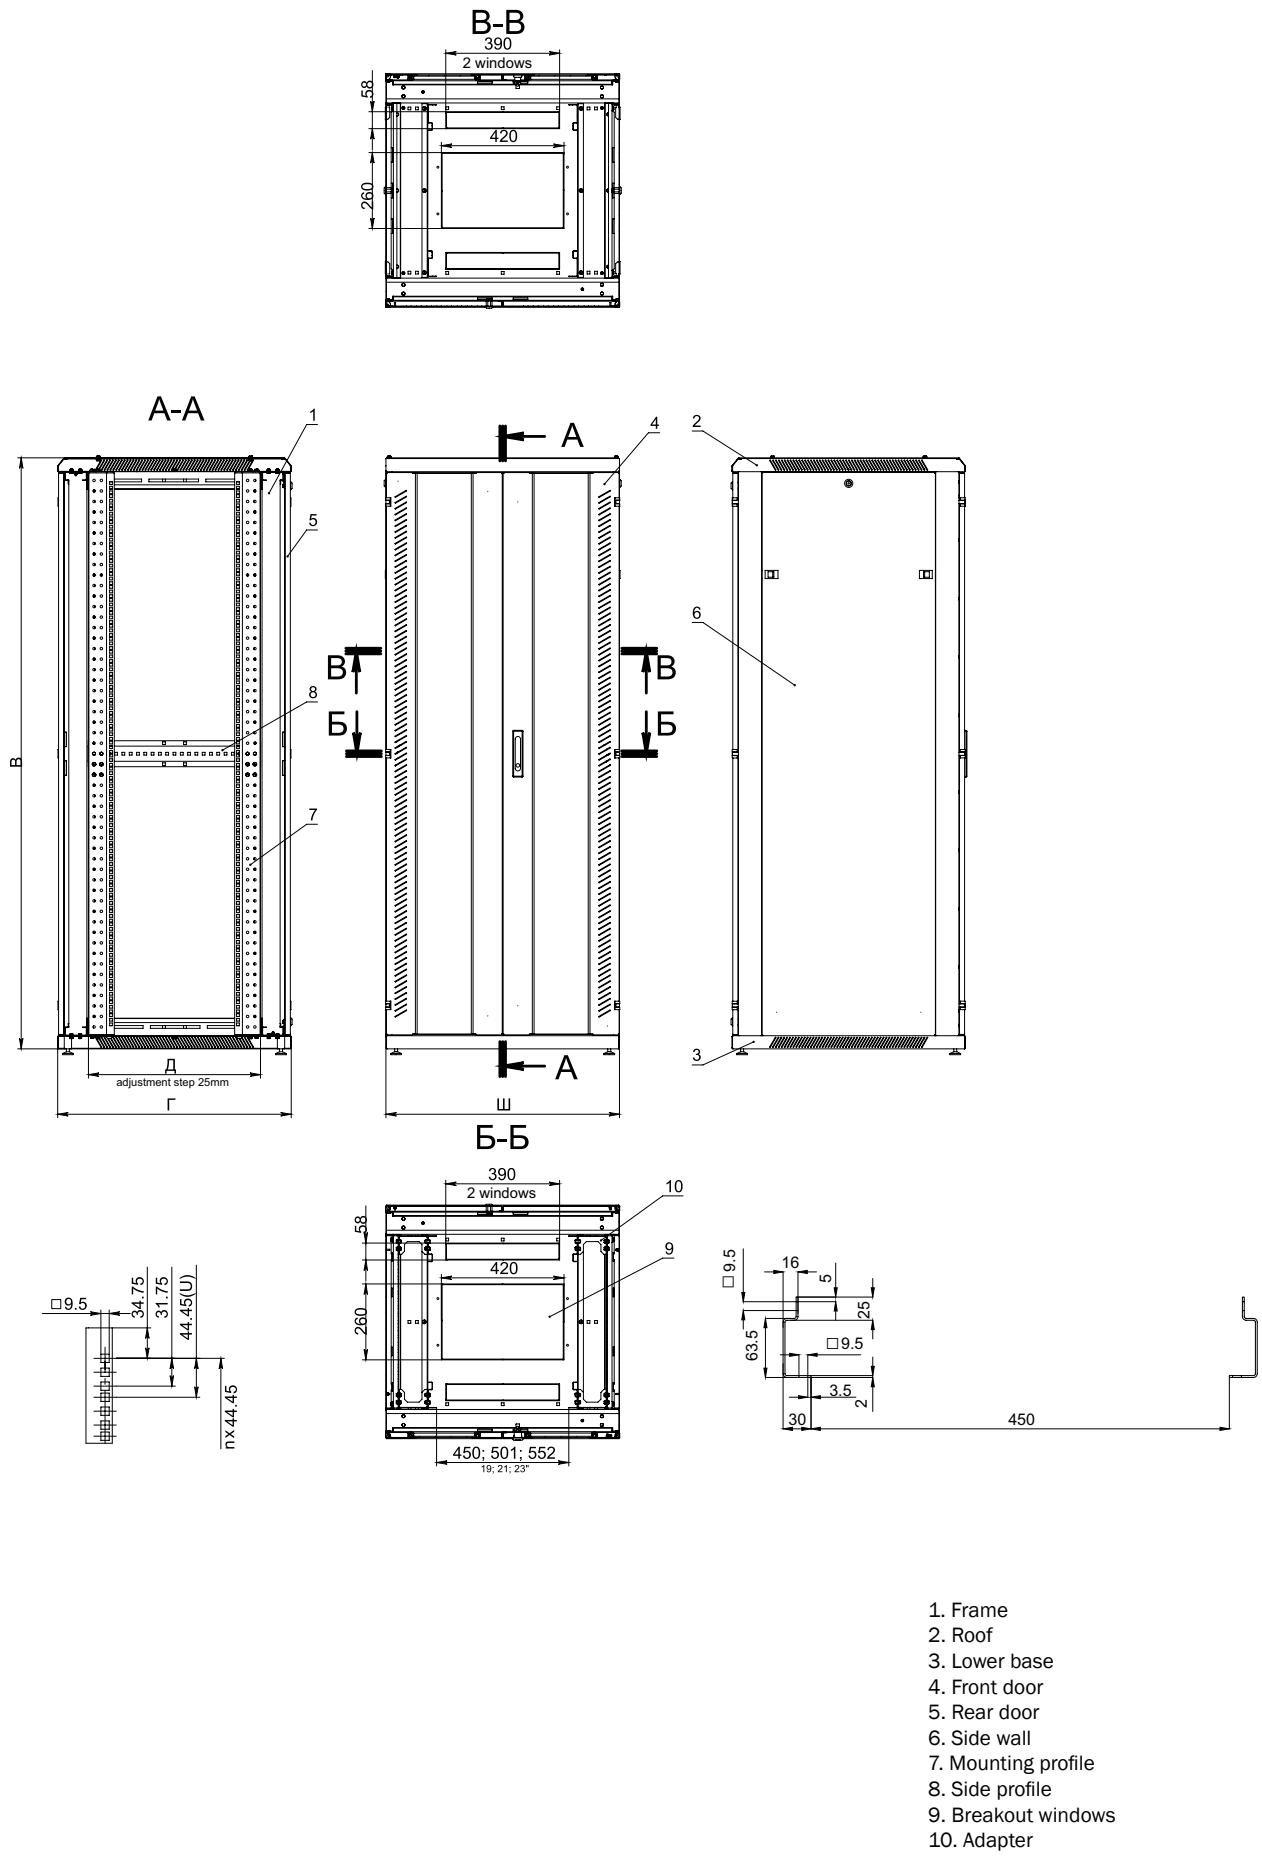

3 years warranty

19" mounting profiles are adjusted per depth and have a numerical height labeling in units

Service life – 25 years

LINEA S cabinets 800×1000 mm, 800×1200 mm

Construction based on strong welded frames have a high degree of fixity, ensuring 1500 kg static load

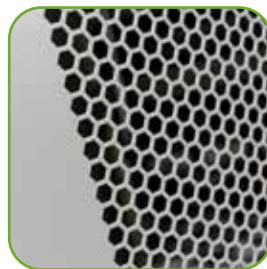

Can be installed in a roof of ceiling fan panel

Locks and plastic latches on removable side walls

Doors are perforated in a shape of a regular hexahedron Perforation degree of ventilated doors – 80%

Crossbar lock with folding handle on a door

Delivered as a pre-fabricated product in corrugated boxes in three units of cargo

All current-conducting parts of a cabinet have grounding studs for a closed electrical circuit

Cabinets can be installed in a row

LINEA S cabinets 800×1000 mm, 800×1200 mm

Features of ITK® LINEA S server cabinets configuration

When manufactured, ITK® server on-floor cabinets are packaged into 3 separate corrugated cardboard boxes and are delivered to customers and partners in disassembled set in 3 cargo units.

Note, that every box has its article in a price list, so in order to assemble a complete cabinet, it is necessary to order all 3 parts.

To simplify selection of required parts when generating specifications for a cabinet and submitting an order for on-floor cabinets, ITK professionals developed a stock-keeping system, which differs from designations in a catalog only by digits 1, 2, 3 at the end according to a number of every part of a cabinet.

Example:

LS35-42U61-PP – Article in a catalog

Complete delivery package in a price list consists of:

Part 1: LS35-42U61-PP-1

Part 2: LS35-42U61-PP-2

Part 3: LS35-42U61-PP-3

Important!

Each part must be added to an order separately!

This way of packaging and delivery of cabinets offers the following advantages:

- simplicity and saving on logistics;
- convenient storage and space optimization on a warehouse;
- easy and convenient lifting on a required floor and passing through standard door ways.

Composition of parts and components of every unit is presented in a LINEA S cabinets configuration table.

Cabinets can be selected in a configurator at a website www.iek.group

The full list of ITK® accessories and components for 19" cabinets can be found on page 45

Additional components and solutions for ITK cabinets

	In order to build SCS from category 5E to 6A with operating frequency up to 500 MHz we recommend to use ITK copper components and patch panels , that are perfect for installation in ITK® 19" cabinets and racks and ensure maximum compatibility with each other	Learn more on page 126
	In order to organize state of the art optical switch systems, we recommend to install 19" optical crosses and optical components into ITK cabinets and racks. ITK optical crosses are the best solution for such task.	Learn more on page 161
	Entry and electric power distribution on active equipment installed inside of ITK cabinets is executed using socket boards and PDU ITK	Learn more on page 183
	In order to ensure good cabling in 19" network and server cabinets, reliable fixation of cable harnesses and to protect cables from potential crushing, we recommend to use ITK cable ties and sticky tapes	Learn more on page 115

Wall-mounted 19" cabinets

Wall-mounted ITK cabinets are used for compact allocation of light 19 inches telecommunication equipment and crosses and designed for local networks, deployed in limited space with no specially designated premises. Usually they are installed in small office premises, in corridors, on stairwell landings of non-residential, administration buildings and business centers.

LINEA W series cabinets

LINEA W series wall-mounted cabinets are applied for compact and convenient allocation of telecommunication equipment. They offer quick and simple access for maintenance, have a nice visual look and don't spoil the interior of premises, which is quite important in such cases.

Construction features of ITK® wall-mounted cabinets allow to maintain the 19" equipment from three sides, securely protect it against unauthorized access, ensure good ventilation, insert information and power cables both from the top and from the bottom. Due to modular construction, small weight and dimensions, LINEA W cabinets can be easily transported and quickly assembled by a single person. The cabinets can be mounted on the wall, on the floor or on another surface using legs included in delivery set.

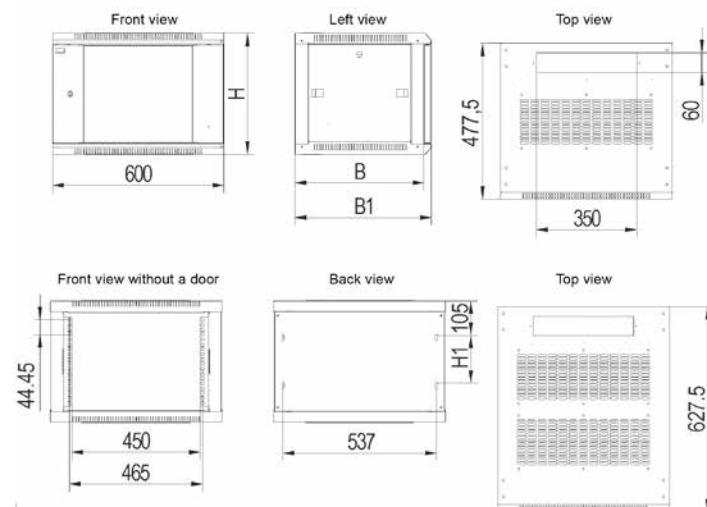

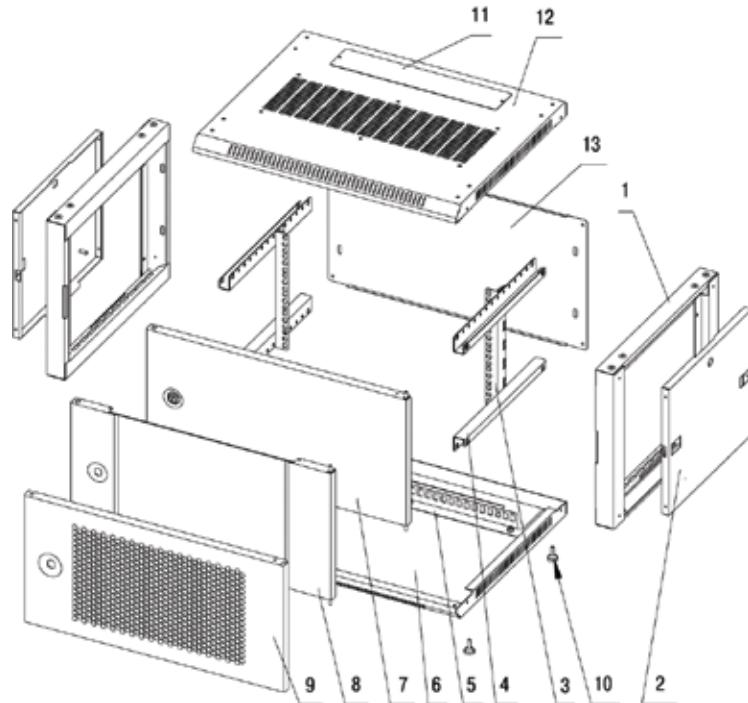

Specifications

	600×450	600×600

Construction features

-  Construction type: pre-fabricated
-  Side walls are removable, fitted with a lock and latches
-  L-shaped form of 19" mounting profiles
-  19" mounting profiles are adjusted per depth and have a numerical height labeling in units
-  Internal space of the cabinet can be accessed from four sides
-  Broad range of versions and dimensions
-  The door can be re-hung easily and quickly
-  Ventilated door has 65% of perforation
-  Assembly and installation in 15 minutes
-  Compliance with Russian and international standards
-  Flat compact package
-  3 years warranty
-  Service life – 25 years

Flush-mounting cabinets

Flush-mounting ITK cabinets are mounted into specially arranged cavities in walls, floor, ceiling. They save space in a room, reliably hide the equipment and offer an adequately usable area for convenient mounting inside of a cabinet. They are designed for allocation of telecommunication active and passive equipment, routers, "smart home" hardware. They have cutting-edge minimalistic design and robust metal construction.

LINEA R series multimedia cabinets

NEW

LINEA R multimedia cabinet is designed for allocation of a router in an apartment, in a home, office or any other premises, where a high quality Wi-Fi signal is required.

It is easily mounted into the wall using a minimum set of tools. Firstly it is necessary to mount an enclosure, than a removable frame with a door. Extended configuration allows not to buy additional components — only a router will be needed. Arrangement of all elements inside can be changed depending on individual needs.

The cabinet perfectly fits the interior due to modern minimalistic design. Saves space. Glass opaque door doesn't block Wi-Fi signal and hides the devices inside.

Racks with adjustable depth

NEW

LINEA F series open mounting racks with adjustable depth are designed for allocation of 19" telecommunication equipment, servers, 19" crosses and other specialized hardware in enclosed premises with limited access. LINEA F racks construction has two frames, adjusted based on depth from 600 to 1000 mm with 50 mm step. Static load of racks when installed on legs is 700 kg. Racks can be installed on legs (not included in the configuration). Due to their construction features, open racks have some advantages in comparison with cabinets, such as unconfined and more convenient mounting/unmounting of equipment, simple administration, better ventilation and cooling of the installed equipment, simple assembly of the construction and small weight.

The full list of ITK® accessories and components for 19" cabinets can be found on page 45

Additional components and solutions for ITK cabinets

	In order to build SCS from category 5E to 6A with operating frequency up to 500 MHz we recommend to use ITK copper components and patch panels , that are perfect for installation in ITK® 19" cabinets and racks and ensure maximum compatibility with each other	Learn more on page 126
	In order to organize state of the art optical switch systems, we recommend to install 19" optical crosses and optical components into ITK cabinets and racks. ITK optical crosses are the best solution for such task.	Learn more on page 161
	Entry and electric power distribution on active equipment installed inside of ITK cabinets is executed using socket boards and PDU ITK	Learn more on page 183
	In order to ensure good cabling in 19" network and server cabinets, reliable fixation of cable harnesses and to protect cables from potential crushing, we recommend to use ITK cable ties and sticky tapes	Learn more on page 115

LINEA O outdoors climate cases

ITK® series of outdoor cabinets is great for allocation of active and passive telecommunication equipment, electrical and measuring instrumentation, uninterrupted power supply units and batteries on open, remote and lightly regulated venues outside of buildings, subject to adverse environment factors. In such conditions LINEA O cabinets excel at maintaining temperature mode, required for the installed equipment and its proper operation, as well as at protection against unauthorized access to equipment.

Construction features

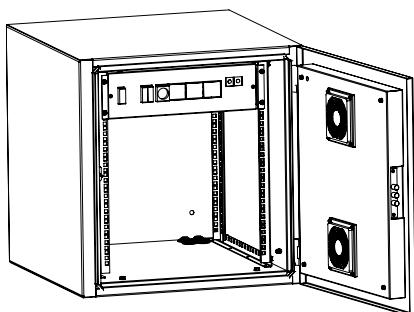

-  Static load of on-floor cabinets – 1000 kg
-  Degree of protection IP55
-  Climatic version - NF 1
-  G-shaped form of mounting profiles
-  Protection of electromagnetic fields
-  Resistant to harsh climatic conditions and UV radiation
-  Custom outdoor climate cabinets are developed and manufactured at customer's technical specification
-  Vandal-proof construction, access to fastening of outer elements is possible only from the inside
-  Basic configuration includes fan modules and a heater for cooling and heating
-  Cabinet is delivered assembled
-  Compliance with Russian and international standards
-  5 Year Warranty
-  Service life – 25 years

Bracket for cabinet hanging

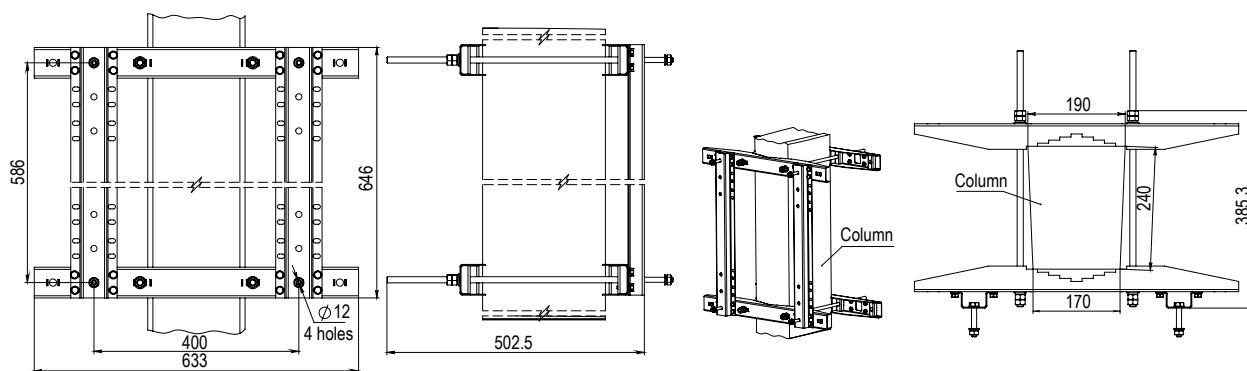

LINEA O wall hanging cabinets are hung in two ways: on a wall using M10 anchor bolts or on a column or support.

Hanging a cabinet on a support requires a versatile column bracket, compatible with LINEA O wall hanging cabinets with heights 9U, 12U and 15U. The bracket can be used to hang the cabinets on square and round supports.

A standard configuration of ITK outdoor wall-hanging cabinets does not include brackets, so they must be ordered separately!

Specifications

	Column bracket
Construction type	pre-fabricated
Material	sheet steel 2.0 mm
Dimensions (H×W), mm	646×633 mm
Hole diameter, mm	12 mm
Fixing to a column	stud M10 (4 pcs.)
Operation conditions according to GOST 15150	NF 1 (outdoors at ambient temperature from -50 to +60°C and relative humidity up to 100 % at 25°C)
Color	RAL7035 (grey)
Cover type	Outdoors PPP
Warranty	3 years
Service life	25 years

Components and accessories

In order to ensure the best performance of ITK cabinets and racks, for mounting and operation it is recommended to use components, accessories and gear manufactured by ITK. ITK components and accessories were developed and produced specially for application with these cabinets, allowing to perform such tasks as convenient allocation of equipment and its further maintenance, ensuring additional cooling, well-thought cabling, feedthrough of cable harnesses and lines to equipment and fixation.

All ITK® accessories are made of high quality materials on state of the art production plant. They are convenient to mount and operate, they are perfectly compatible with cabinets and racks of any manufacturers and have an eye-appealing visual look.

Construction

Accessories, installed on 19" vertical mounting profiles, are manufactured according to GOST 28601.1 and GOST 28601.2 and in climate version NF in allocation category 4 according to GOST 15150 (operation in closed premises at temperature from +5 °C to +45 °C and relative humidity of ambient air up to 80 % at 25 °C). Components and accessories for ITK® cabinets are manufactured on proprietary production plant out of cold-rolled steel sheet from 0.8 mm to 1.5 mm thick depending on designation. Accessories are made using metal saw cutters, forming punches, welding. After processing and bonderization, the surface of the finished product is covered with powdered paint of two main color types: grey RAL 7035 and black RAL 9005 according to two main colors of the cabinets and racks. Ceiling fan panels are fitted with: fan blocks with 120x120 mm bearing, LED switch, IEC320 C14 socket, thermostat. Construction of lighting sheets, in addition to metal base, includes an LED fixture of DBO series. Construction of brush entries includes bristle made of PBT polyester. Construction of power distribution panels includes S type 17.5 mm DIN rail for 22 modules.

Construction features

-  Wide range of types and versions
-  Ensure efficient utilization of the cabinet mounting space
-  Modern eye-appealing design and clever construction
-  Two color versions: grey and black
-  Convenient to mount and operate
-  Always available in the warehouse
-  Delivered in high quality compact packaging
-  1 year warranty for all accessories
-  Compliance with Russian and international standards
-  Service life is at least 5 years

SOLUTIONS FOR COLD AND HOT AISLES IN SERVER ROOMS AND DC

www.iek.group

Server cabinets ITK® by ZPAS for data centers

- Robust construction
- Multifunctionality
- Safety
- Efficiency

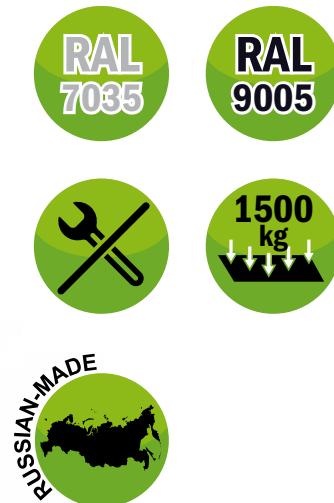

A new series of telecommunications cabinets ITK® by ZPAS is developed by IEK GROUP in collaboration with one of European leaders in passive telecommunications equipment production industry – ZPAS company.

The series of cabinets for data centers (DC) ITK® by ZPAS is designed based on innovative developments and adapted for the Russian market. Telecommunication cabinets ITK® by ZPAS are manufactured on IEK GROUP plant in Yasnogorsk (the Tula Region).

Server cabinets ITK® by ZPAS for data centers

NEW

ITK® by ZPAS cabinets have a pre-fabricated construction based on a fully symmetrical profile. Their frame is built based on closed profiles, perforated in two planes, which allows flexible placement of equipment and components, as well as convenience when joining cabinets in. We have made ITK® by ZPAS cabinets cross-functional and taken into account operation conditions in Russia, because ITK® produces ITK® by ZPAS cabinets in Russia and for Russia!

Specifications

ROBUST CONSTRUCTION

- Robust pre-fabricated frame made of steel closed profiles.
- Static load capacity:
1360 kg – for a cabinet, mounted on legs;
1500 kg – for a cabinet without legs, mounted right on the floor.

MULTIFUNCTIONALITY

- Smooth and convenient (with no tools) adjustment of 19" mounting profiles.
- Easy installation of equipment due to unit (U) mapping on profiles.
- Mounting width can be changed from 19 to 21 inches without any additional elements (in cabinets 800 mm wide).
- Door opening angle up to 270 degrees with an option to change door handing.
- Convenient access to equipment due to side panels, consisting of 2 sections.
- Partition panels between cabinets can be installed on any stage of operation.
- No tools are required to connect grounding cables with cabinet components.
- No tools are required to install a top panel of a cabinet.
- The frame contains holes to install accessories.

SAFETY

- Robust cabinet locking system:
5-points for single-leaf doors,
3-points for two-leaf doors.
- An option to use locks with access control.

EFFICIENCY

- Front and rear doors with optimal perforation level 80%.
- For the required inlet of cold air to equipment, total area of perforation zone is about 86% of the door square.
- Cold air inlet is optimized using components, allowing to divide cold and hot zones both within a single cabinet and as part of a module system consisting of a lot of cabinets.

ITK® BY ZPAS SYSTEM

ITK® by ZPAS server cabinets system is a new quality level for data center solutions. Scalability and multifunctionality of the system, as well as easy adaptation are achieved using additional equipment:

- components to build a cold aisle;
- elements to organize air streams within a cabinet;
- elements to organize cabling;
- elements to organize electric power.

DELIVERY SET

Standard configuration of a cabinet:

- pre-fabricated frame;
- perforated single-leaf front door;
- perforated single- or two-leaf rear door;
- top panel with perforation and breakout plugs;
- two pairs of mounting profiles at 19" distance;
- grounding wires for a door, top panel and mounting profiles;
- adjustable legs.

Additional fitting (ordered separately):

- side panels and other accessories;
- shelves, lighting, 19" blanking plates.

TECHNICAL INFORMATION

Material

Sheet steel.

Protection degree

IP 20 – according to EN 60529 standard
(not applicable to brush entries).

Surface finish

Frame, side panels, doors, top panel: painted using powder paint of grey (RAL 7035) or black (RAL 9005) color.

Mounting profiles and other metal elements:
protected by zincplating coat.

Construction features

Static load 1500 kg

Broad range of versions and dimensions

Quick assembly

Unique durable profile

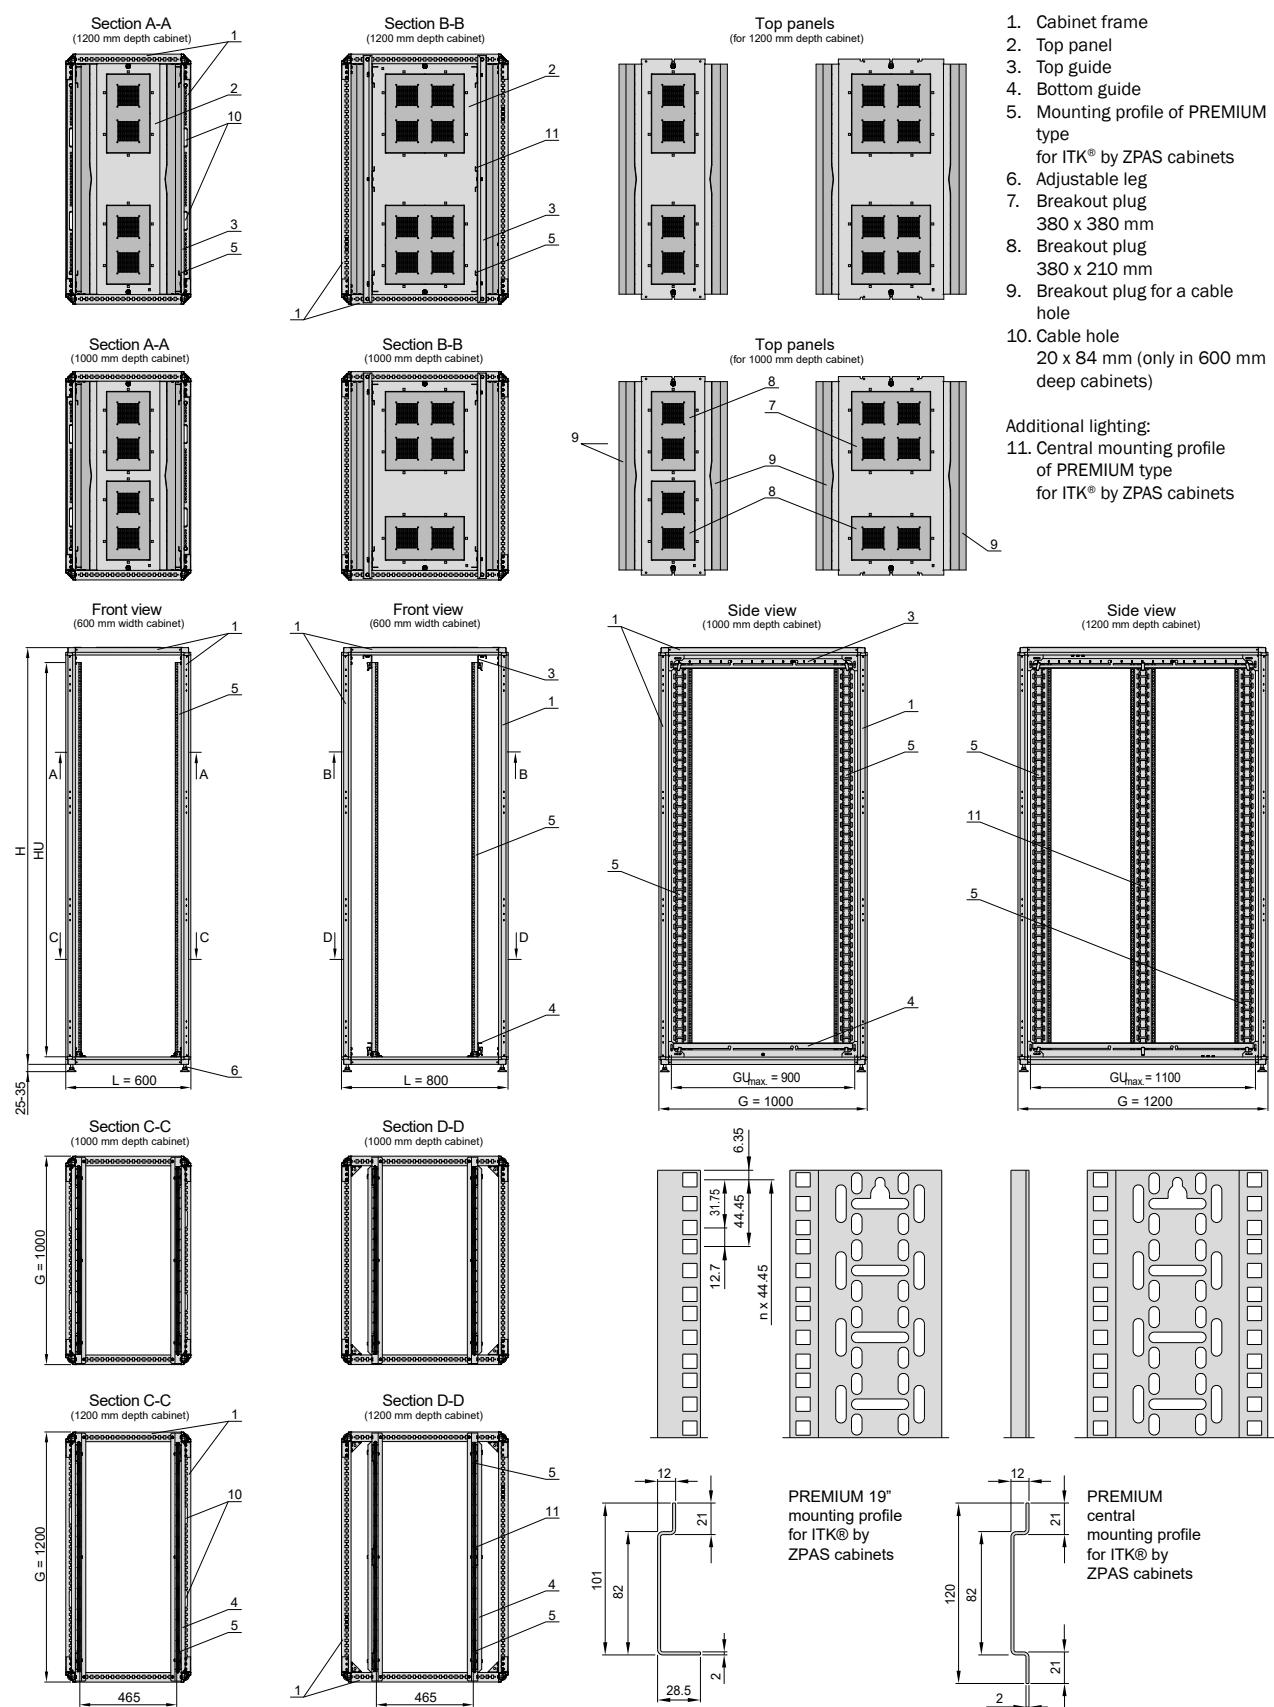

Designed in Europe

3 years warranty

Construction

Cabinets on a drawing are shown with no doors and side panels.

Side panels

Available in two versions, different in depth.

A type side panels (small):

- allow to open a door at an angle up to 270 degrees;
- increase total cabinet depth by 3 mm at each side.

B type side panels (deep):

- ensure the required mounting space in 600 mm deep cabinets for installation of socket boards between a side panel and a vertical mounting profile;
- increase total cabinet depth by 11 mm at each side.

Partition

Designed to be installed between cabinets, combined in a row.

Contains four cable holes 150 x 45 mm, closed by breakout plugs, and four clearances for cabinet junction board. Specially curved edges of the top and side panels of the partition simplify installation between frames of adjacent cabinets. Distance between cabinets, required to install the partition, is just 2 mm.

Partition comes in two options, different in height:

- partition of type **C – for cabinets on legs;**
- partition of type **D – for cabinets without legs;**

Boards for junction of cabinets should be ordered separately.

Horizontal and vertical blanking plates
for 800 mm cabinet

Vertical blanking plates

They cover distance between 19" mounting profiles and side panel of a cabinet. Prevent inlet of hot air to a space in front of a cabinet, allowing to increase efficiency of air cooling system.

Blanking plates for 800 mm wide cabinets have holes for cable rings and installation of 1U high cable channels, allowing to install various additional equipment.

Blanking plates can be fastened to mounting profiles without any tools.

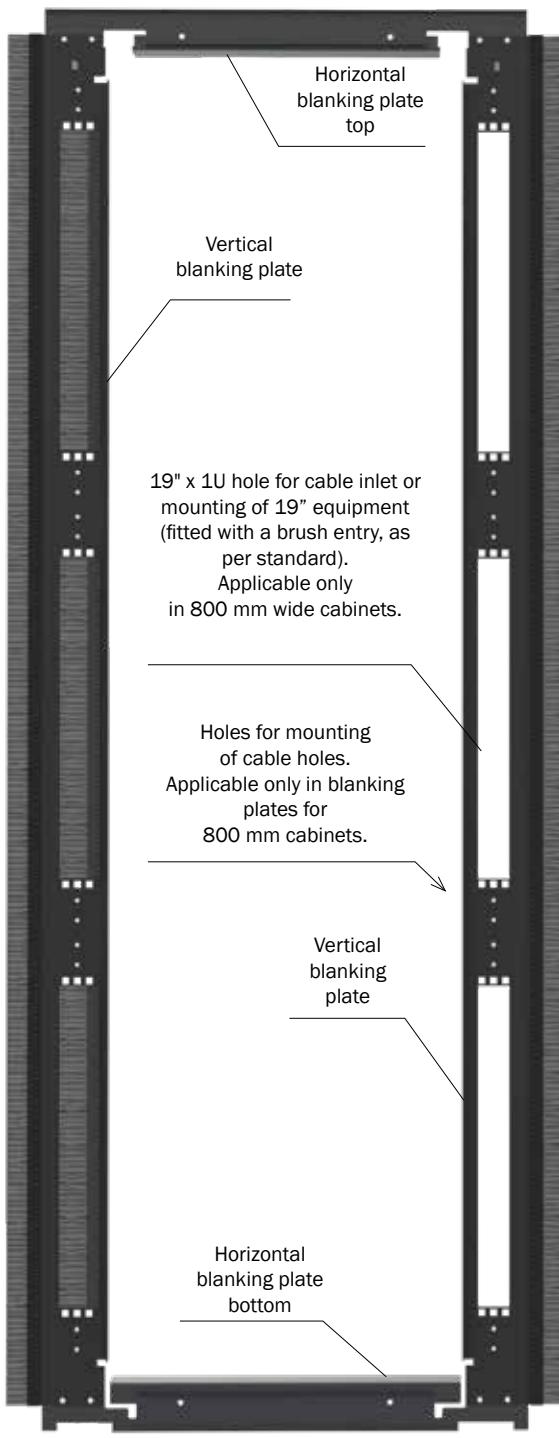

Specifications

- Material sheet steel
- Coating powder painting
- Color RAL 7035 (grey)
RAL 9005 (black)
- Brush inserts are made of black plastic

Configuration

Insulated cold aisle

Insulated cold aisle is a physical partition of cold air, fed from conditioning devices, and hot air stream, generated by operating equipment.

Insulated cold aisle ensures optimal utilization of data center infrastructure.

Cold aisle roof (high)

150 mm high roof module. Top transparent element of a module can be lifted and installed with no tools. Modular design provides convenient extension.

Specifications

- Material sheet steel
- Coating powder painting
- Color RAL 7035 (grey)
RAL 9005 (black)
- Transparent polycarbonate element

Configuration

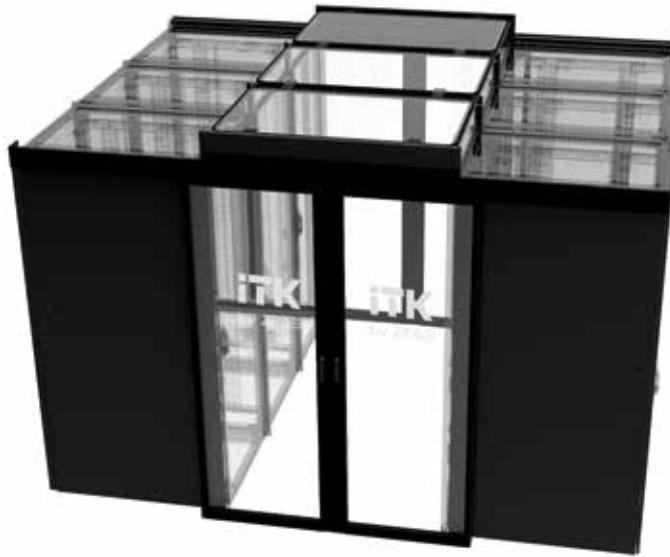

- Roof module
- Fasteners

Product range

Name	For a cabinet with width (mm)	Article, Grey color RAL 7035	Article, black color RAL 9005
Cold aisle roof	600	WZ-8477-45-01-011	WZ-8477-45-01-161
Cold aisle roof	800	WZ-8477-45-02-011	WZ-8477-45-02-161

Sliding doors of a cold aisle

Glass sliding doors with manual actuator with no lock, expandable on the full width of an aisle, in a set with a blanking plate of an aisle roof and side panels of cabinets.

Specifications

- Material aluminum profiles; tempered glass; sheet steel
- Coating powder painting
- Color RAL 7035 (grey)
RAL 9005 (black)

Configuration

- Wings of sliding doors – 2 pcs.
- Side panels of cabinets – 2 pcs.
- Blanking plate
- Aisle roofs
- Fasteners

ITK

LAN cable

- Indoor twisted pair of 5E, 6, 6A and 7 categories
- Outdoor twisted pair of 5E and 6 categories

ITK cables with copper conduct carrying strands are designated to build structured cable systems, local computing networks, for general communication infrastructure of buildings, trunk and horizontal subsystems to transmit information in Ethernet networks on a frequency between 100 to 1000 MHz.

Due to cutting edge equipment and high quality equipment, ITK LAN cables offer persistently high properties, meeting up-to-date international standards, certified according to GOST R and TR CU.

Depending on cable structure, laying conditions and scope of application, ITK® communication cables are presented by the following main groups:

Indoor twisted pair

- category 5E shielded and unshielded;
- category 6 shielded and unshielded;
- category 6A and 7 shielded and unshielded;
- multipair cables shielded and unshielded;

Outdoor twisted pair

- category 5E shielded and unshielded;
- category 6 shielded and unshielded;
- multipair cables shielded and unshielded;

Coaxial cable RG6 and RG11.

ITK produces a wide range of ports and protective caps for cable termination in order to connect them to active or passive equipment, connect to Keystone Jack modules and information sockets. Cable stripping, crimping, dressing into modules and other operations with cable are executed using ITK® tool, developed specially for these purposes.

Indoor twisted pair

The most common type of cable, applied in cable systems and IT infrastructure of buildings, is an indoor twisted pair communication cable. It belongs to a symmetrical electric cables class and is used to transmit information in Ethernet networks on a frequency from 100 to 1000 MHz, has a low price and is simple to mount. Multipair ITK® cable is designed for voice communication systems and Ethernet low bandwidth data transmission applications.

Construction features

ITK® LAN cable consists of pairs, formed by two current-carrying copper conductors, covered with insulation made of PVC or high density polyethylene, twisted between each other with a certain length of twist and protected by an outer sheath. Current-carrying conductors can be single-wired and multi-wired. The latter are common in cables, used to manufacture patch cords.

Depending on operating frequency, cables are divided into categories 5E, 6, 6A, 7 (according to ISO/IEC 11801:2002(E) and GOST R 54429). Depending on a twisted pair type, quantity of pairs under an outer jacket varies between 1 to 100; they can be shielded and unshielded.

Shell of an indoor twisted pair usually is made of PVC, polyethylene (PE) or a material based on combination of polyethylene, polyvinyl-chlorid and special additions, that slows down burning, emits a small amount of smoke and does not contain halogens in the combustion products (LSZH). Also this can be an unshielded or shielded foil, metal tape or braiding made of metal wires.

All ITK® cables have a label indicating cable category, quantity of pairs, type and diameter of a copper conductor, as well as length tags in every meter. LAN cables are delivered in cardboard boxes or on wooden drums in 100, 305 and 500 meters.

Advantages

- Applicable for networks ISDN, 10baseT, 100baseT, 1000baseT, EIA RS 232/485, 155 Mbit ATM, Token Ring.
- Compliance with international standards
- Extended frequency range
- Shielded cables are great at protecting networks against large electromagnetic interferences and radiations.
- Twisted pair conductors are made of high quality electric copper T1.
- They can be executed in outer jackets, meeting fire safety requirements.
- There is a large selection of cabling depending on customer's requirements and needs.
- Convenient and clear labeling.
- Minimum delivery time.
- GOST R and TR CU compliance certification.

Article explanation based on LC1-C5E02-311 instance

LC1 type of cable and laying conditions

LC1 – single-wire (SOLID) for indoor laying
 LC2 – multi-wire (PATCH) for indoor laying

C5E cable category according to GOST R 54429 and in compliance with ISO/IEC 11801:2002(E)

C5E – 5E category cable

C6 – 6 category cable

C6A – 6A category cable

C7 – 7 category cable

02 quantity of pairs

01 – 1 pair

02 – 2 pairs

04 – 4 pairs

.....

100 – 100 pairs

3 - shield type:

Specifications

Name	LC1-C704-622
Category	7
Bandwidth	600 MHz
Shielding type	S/FTP
Quantity of pairs	4
Conductor material	Copper
Conductor type	Single wire (solid)
Conductor diameter	23 AWG (0.57 ± 0.01 mm)
Conductor section	0.255 mm^2
Conductor insulation material	Polyethylene foam
Conductor insulation thickness	0.38 mm
Conductor insulation diameter	1.33 mm
Outer sheath material	LSLTx ng(A)-LSLTx
Application	Indoor laying
Shell thickness	0.55 ± 0.05 mm
Shell outer diameter	7.6 ± 0.4 mm
Shell color	green
Individual shield construction	Polyester aluminum foil
General shield construction	Braiding made of tinned copper wire
Drain conductor	Yes
Ripcord	Yes
Bend radius at laying	At least 10 diameters of a cable
Bend radius at operation	At least 8 diameters of a cable
Permissible tensile force	110 N
Surge resistance	100 ± 15 Ohm
Notational velocity of propagation (NVP)	74%
Maximum capacity mismatch	$160 \text{ pF}/100 \text{ m}$
DC resistance of conductor at 20°C	Max. 9.38 Ohm/100 m
DC resistance asymmetry of a single pair strands	Max. 2%
Signal propagation delay mismatch	Max. 25 ns/100 m
Strand insulation resistance	Min. 5 GOhm·km
Tear force	900 N
Length	305 m

Specifications

Name	LC1-C704-622
Standard compliance	GOST R 54429, ISO/IEC 11801, TIA/EIA 568-C.2 EN50173 RoHS 2011/65/EU REACH EC 1907/2006
Temperature range	-40...+60°C
Type of packaging	Plastic drum in a cardboard box
Package dimensions	350×350×380 mm.
Bulk weight	61.6 kg
Warranty	Component-wise – 15 years System-wise – 25 years

Specifications

Category	7
Bandwidth	600 MHz
Shielding type	S/FTP
Quantity of pairs	4
Conductor material	Copper
Conductor type	Single wire (solid)
Conductor diameter	23 AWG (0.57 ± 0.01 mm)
Conductor section	0.255 mm ²
Conductor insulation material	Polyethylene foam
Conductor insulation thickness	0.39 mm
Conductor insulation diameter	1.35 mm
Outer sheath material	LSZH HR(A)-HF
Application	Indoor laying
Shell thickness	0.55 ± 0.05 mm
Shell outer diameter	8 ± 0.4 mm
Individual shield construction	Polyester aluminum foil
General shield construction	Braiding made of tinned copper wire
Drain conductor	Yes
Ripcord	Yes
Bend radius at laying	At least 10 diameters of a cable
Bend radius at operation	At least 8 diameters of a cable
Permissible tensile force	110 N
Surge resistance	100 ± 15 Ohm
Notational velocity of propagation (NVP)	74%
Maximum capacity mismatch	160 pF/100 m
DC resistance of conductor at 20°C	Max. 9.38 Ohm/100 m
DC resistance asymmetry of a single pair strands	Max. 2%
Signal propagation delay mismatch	Max. 45 ns/100 m
Strand insulation resistance	Min. 5 GOhm·km
Tear force	900 N
Length	305 m
Standard compliance	GOST R 54429, ISO/IEC 11801, TIA/EIA 568-C.2 EN50173 RoHS 2011/65/EU REACH EC 1907/2006
Temperature range	-20...+60°C
Type of packaging	Plywood drum
Package dimensions	350 × 350 × 350 mm
Bulk weight	59.8 kg

* HR – not flammable; LS – Low Smoke; LTx – Low Toxic

LAN cable of category 5E Indoor laying

Cable view in a cross section

Specifications

Conductor diameter	0.51; 0.52
Conductor nominal cross-section	0.212 mm ²²
Conductor class	class 1 (single-wire strand)
Quantity of strands	4×2, 2×2
Stranding element	Paired
Strand insulation	Solid polyethylene
Strand labeling	color
Stranding surface shield	foil
Outer sheath material	LSZH/PVC
Outer sheath color	grey
Category	5E
NVP indicator	69%
Conductor material	copper
Outer cable diameter	6.5±0.5
Mounting temperature	-10...+50°C
Operating temperature	-40...+60°C
Insulation resistance	5000 MΩ
Maximum DC resistance on 100 m and + 20°C, not more than	9.5 Ohm
Surge resistance	100±15 Ohm
Nominal bitrate	69%
Signal frequency	100 MHz
Operating voltage	≤ 48 V
Cable length	305 m
Max. capacity mismatch, pF per 100 m	160

LAN cable of category 5E Indoor laying

Cable view in a cross section

Specifications

Shielding type	F/UTP	U/UTP
Category	5E	
Bandwidth	100 MHz	
Quantity of pairs	2	
Conductor material	Copper	
Conductor type	Single wire (solid)	
Conductor diameter	24 AWG (0.51 ± 0.01 mm)	
Conductor section	0.204 mm^2	
Conductor insulation material	High density polyethylene (HDPE)	
Conductor insulation thickness	0.25 mm	0.20 mm
Conductor insulation diameter	0.99 mm	0.90 mm
Outer sheath material	LSZH hr(A)-LSLTx / LSZH hr(A)-HF / PVC	
Application	Indoor laying	
Shell thickness	0.50 ± 0.05 mm	0.50 ± 0.05 mm
Shell outer diameter	4.2 ± 0.4 mm	4 ± 0.4 mm
General shield construction	Polyester aluminum foil	-
Drain conductor	Yes	-
Ripcord	Yes	
Bend radius at laying	At least 10 diameters of a cable	
Bend radius at operation	At least 8 diameters of a cable	
Permissible tensile force	100 N	
Surge resistance	100 ± 15 Ohm	
Notational velocity of propagation (NVP)	69%	
Maximum capacity mismatch	$160 \text{ pF}/100 \text{ m}$	
DC resistance of conductor at 20°C	Max. $9.5 \text{ Ohm}/100 \text{ m}$	
DC resistance asymmetry of a single pair strands	Max. 5%	
Signal propagation delay mismatch	Max. $45 \text{ ns}/100 \text{ m}$	

* hr – not flammable; LS – Low Smoke; LTx – Low Toxic

Specifications

LAN cable for outdoor laying

For the cases, when a communication cable needs to laid outside of premises, e. g. along the outer building wall, on a roof, in a header, in a shaft, telephone conduit when building horizontal or vertical SCS subsystems and combining switching nodes, located in different buildings, it is necessary to use a cable with increased durability of outer sheath and resilient to harsh weather conditions. For such objectives and tasks ITK offers 5E and 6 categories LAN cables, working perfectly in a range 100-500 MHz and meeting cutting edge international standards.

Construction features

ITK® LAN cable for outdoor laying consists of twisted pairs, formed by two copper single-wire strands, covered with insulation made of high density polyethylene, twisted between each other with a certain length of twist. Twisted pair are protected by an outer sheath, which is made of highly durable polyethylene, halogen-free or compound (LSZH), resilient to ultra-violet radiation and temperature drops. For the cases, when the outer jacket is subjected to increased environment impact, it is manufactured using two-layer coating: outer one made of low density polyethylene, resilient to ultra-violet radiation (LDPE), and an inner one made of LSZH. For better resiliency to electromagnetic interference, a protective shield can be under an outer jacket.

Twisted pair for outdoor laying is presented by categories 5E and 6 (according to ISO/IEC 11801:2002(E) and TIA/EIA-568-B.2). Depending on a type of LAN cable, quantity of pairs under an outer jacket varies from 2 to 100, they can be additional shielded by foil, metal tape or braiding made of metal wires.

All ITK® cables have a label indicating cable category, quantity of pairs, type and diameter of a copper conductor, as well as length tags in every meter. Twisted pair is delivered on drums per 305 m, 500 m and in coils per 100 m.

Advantages

- Increased durability of an outer sheath and resiliency to UV-radiation.
- Extended range of operating temperatures and laying temperatures.
- Applicable for networks PBX, ISDN, 10baseT, 100baseT, EIA RS 232/485, Token Ring, TB.
- Compliance with international standards
- In an operating frequency range, cable transmission characteristics of ITK® cable exceed limit values, defined by standards.
- Twisted pair conductors are made of high quality electric copper T1.
- They can be executed in outer jackets, meeting fire safety requirements.
- There is a large selection of cabling depending on customer's requirements and needs.
- Convenient and clear labeling.
- Minimum delivery time.
- GOST R and TR CU compliance certification.

Explanation of designations for LC3-C5E04-339

LC3 type of cable and laying conditions

LC3 – single-wire (SOLID) for outdoor laying

C5E cable category according to GOST R 54429 and in compliance with ISO/IEC 11801:2002(E)

C5E – 5E category cable

C6 – 6 category cable

C6A – 6A category cable

04 Quantity of pairs

01 – 1 pair

02 – 2 pairs

04 – 4 pairs

.....

LAN cable of category 6 Outdoor laying

Cable view in a cross section

Specifications

Shielding type	F/UTP	U/UTP
Category		6
Bandwidth		250 MHz
Quantity of pairs		4
Conductor material		copper
Conductor type		Single wire (solid)
Conductor diameter		23 AWG (0.57 ± 0.01 mm)
Conductor section		0.255 mm^2
Conductor insulation material		High density polyethylene (HDPE)
Conductor insulation thickness	0.29 mm	0.23 mm
Conductor insulation diameter	1.14 mm	1.02 mm
Outer sheath material	LSZH hr(A)-HF / LDPE	
Application	for outdoor laying	
Shell thickness	0.55 ± 0.05 mm	
Shell outer diameter	7.5 \pm 0.4 mm	6.2 \pm 0.4 mm
General shield construction	Polyester aluminum foil	-
Drain conductor	Yes	-
Ripcord	Yes	
Bend radius at laying	at least 10 diameters of a cable	
Bend radius at operation	at least 8 diameters of a cable	
Permissible tensile force	110 N	
Surge resistance	100 \pm 15 Ohm	
Notational velocity of propagation (NVP)	72%	69%
Maximum capacity mismatch	160 pF/100 m	
DC resistance of conductor at 20°C	Max. 9.38 Ohm/100 m	
DC resistance asymmetry of a single pair strands	Max. 2%	
Signal propagation delay mismatch	Max. 45 ns/100 m	

* HR – not flammable; LS – Low Smoke; LTx – Low Toxic

Specifications

Shielding type	F/UTP	U/UTP
Strand insulation resistance		Min. 5 GOhm·km
Tear force		600 N
Length		305 m
Standard compliance	GOST R 54429, ISO/IEC 11801, TIA/EIA 568-C.2 EN50173 RoHS 2011/65/EU REACH EC 1907/2006	
Temperature range	-60...+60°C	
Type of packaging	Plywood drum	
Package dimensions, mm	350×350×380	325×325×265
Bulk weight	54 kg	44.3 kg

LAN cable of category 5E Outdoor laying

Cable view in a cross section

Specifications

Conductor diameter	0.51 mm
Conductor nominal cross-section	0.204 mm ²
Conductor class	Class 1 (single-wire strand)
Quantity of strands	4×2
Stranding element	Paired
Strand insulation	Solid polyethylene
Strand labeling	Color
Stranding surface shield	Foil
Outer sheath material	LDPE
Outer sheath color	Black
Category	5E
NVP indicator	69%
Conductor material	Copper
Outer cable diameter	6.5±0.5 mm
Mounting temperature	-10...+50°C
Operating temperature	-40...+60°C
Insulation resistance	5000 MΩ
Maximum DC resistance on 100 m and + 20°C, not more than	9.5 Ω
Surge resistance	100±15 Ω
Nominal bitrate	69%
Signal frequency	100 MHz
Operating voltage	≤ 48 V
Cable length	305 m
Max. capacity mismatch, pF per 100 m	160

Cable connectors

For high quality and reliable switching of all cables with equipment, sockets, modules and other kinds of connections, ITK produces RJ-11, RJ-12, RJ-45, BNC, PAL connectors and protective caps for them. All connectors perfectly fit with majority of networks and are compatible with equipment for SCS and cables by other manufacturers.

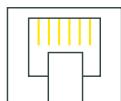

Advantages

- ITK® connectors are designed for operation in a broad range of temperatures.
- They are made of high quality materials and metals with high conductivity.
- Applicable for networks PBX, ISDN, 10baseT, 100baseT, EIA RS 232/485, Token Ring, TB.
- They are regularly checked and tested on the company's plants.
- Construction and technical parameters meet requirements of international standards.
- There is a large selection of connectors depending on requirements and types of cables.
- They are compatible with all kinds of crimping tool by ITK® and other manufacturers.
- They provide high transmission rate.

RJ-45 connectors for dressing in field conditions

Specifications

- | | |
|--|---|
| • Connector enclosure | polycarbonate |
| • Enclosure shielding | nickel-plated zinc, cast enclosure |
| • RJ-45 contacts | phosphorus bronze with gold sputtering |
| | 1.27 µm (50 µ") on top of 2.54 µm (100 µ") nickel plating |
| • Insulation displacement contacts (IDC) | phosphorus bronze with coating 2.54 µm (100 µ") of pewter |
| • Printed circuit board (PCB) | fiberglass (FR-4) |

These connectors provide quick and reliable termination of cables, that consequently can be directly (without a socket) connected to Wi-Fi access points, video cameras, lighting systems, distribution antenna systems (DAS), building automation devices and different IP- and PoE-devices, applied in modern high capacity networks.

Connectors meet requirements of 6 and 6A categories and are suitable both for unshielded and shielded cables with single-wire and multi-wire strands.

Product range

Name	Shield availability	Category	Article
Connector RJ-45 UTP for cable of cat. 6 field termination	none	6	CS3-1C06U-Q
Connector RJ-45 ATP for cable of cat. 6 field termination	yes	6	CS3-1C06F-Q
Connector RJ-45 ATP for cable of cat. 6A field termination	yes	6A	CS3-1C6AF-Q

Unshielded RJ-45 connectors

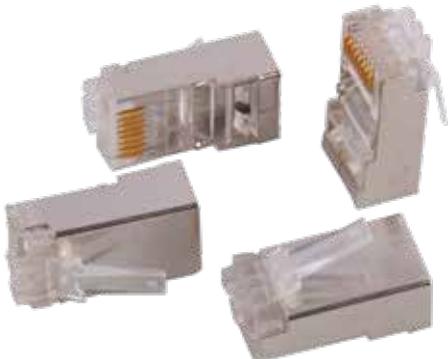

Specifications

- Connector type RJ-45
- Cable category cat.5E, cat.6/BBA
- Contacts configuration 8P8C
- Purpose Data transmission networks, computer networks
- Enclosure material transparent polycarbonate
- Contacts material copper base alloy with gold sputtering
- Thickness of gold sputtering on contacts 0,5 µm
- Construction type with inserts
- Packaging polyethylene bag (20 pcs.)

Product range

Name	Insert	Contacts configuration	Article
Connector RJ-45 UTP cat.5E	7A	8P8C	CS3-1C5EU

Interface Cable

ITK RS-485

Made
in Russia

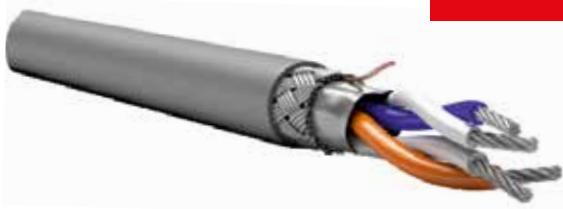

Specialized interface cables are designed for high speed data transfer and reception in industry networks of CAPCS (Computer-Aided Process Control System), built based on interfaces (protocols) RS-485, CAN, "4-20 mA", HART, Profibus and others, for operating voltage up to 300 V. The cables are flexible and have copper tinned strands.

Shielded cables are applied in buildings and structures with higher level of electromagnetic interference. Dual shield consists of aluminum foil with additional braiding made of copper tinned wires.

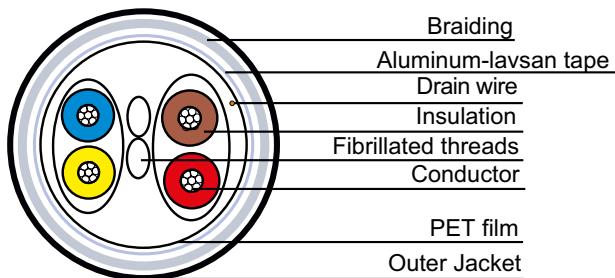

Surge resistance – 120 Ohm

Interface cable RS-485

NEW

Cable view in a cross section

Scope of application:

- for data collection and transmission systems, applying RS-485 industrial interface, according to standards ISO/IEC 8482, TIA/EIA RS-485-A;
- flexible cables are applied for laying in inaccessible places with a small bending radius;
- shielded cables are applied in buildings and structures with higher level of electromagnetic interference.

Cables with hr(A)-LS index are applied in indoor electrical installations, production premises, enclosed cable structures, etc.

Cables with hr(A)-HF index are laid in multifunctional buildings, building complexes and structures with mass presence of people, etc.

Construction features

Conductor:

- multi-wire copper tinned strands 0.6 mm (7×0.20 mm) diameter;
- multi-wire copper tinned strands 0.78 mm (7×0.26 mm) diameter;

Insulation:

- solid polyethylene (PE);
- foamed polyethylene.

Shield: aluminum-lavsan tape with contact conductor and braiding made of copper tinned wires.

Shell:

- hr(A)-LS – flexible PVC compound with low smoke and gas release;
- hr(A)-HF – halogen-free polymer compound (LSZH).

Shell color:

- hr(A)-LS – grey, for indoors and outdoors operation (if protected against solar radiation and atmospheric precipitation);
- hr(A)-HF – black, for laying indoors and outdoors (open air, protection against ultra-violet).

Main Features:

- non-flame retardant in case of bunch laying;
- minimum bending radius – $8 \times D_h$, where D_h – outer cable size;
- flexible, with multi-wire strand;
- shielded;
- cables with hr(A)-HF index for outdoor laying with black outer jacket.

ITK Cable RS-485 КГнг(А)-LS Nx2x0,6, ITK Cable RS-485 КГнг(А)-HF Nx2x0,6, outer jacket – solid polyethylene (PE)

RS-485 interface armor cable

Cable view in a cross section

Scope of application:

- for data collection and transmission systems, applying RS-485 industrial interface, according to standards ISO/IEC 8482, TIA/EIA RS-485-A;
- shielded cables are applied in buildings and structures with higher level of electromagnetic interference;
- shielded cables are protected against external mechanical impact, including by gnawing animals.

Cables with hr(A)-LS index are applied in indoor electrical installations, production premises, enclosed cable structures, etc.

Cables with hr(A)-HF index are laid in multifunctional buildings, building complexes and structures with mass presence of people, etc.

Construction features

Conductor:

- multi-wire copper tinned strands 0.6 mm (7×0.20 mm) diameter;
- multi-wire copper tinned strands 0.78 mm (7×0.26 mm) diameter.

Insulation:

- solid polyethylene (PE);
- foamed polyethylene.

Shield: aluminum-lavsan tape with contact conductor and braiding made of copper tinned wires.

Shell:

- hr(A)-LS – flexible PVC compound with low smoke and gas release;
- hr(A)-HF – halogen-free polymer compound (LSZH).

Shell color:

- hr(A)-LS – grey, for indoors and outdoors operation (if protected against solar radiation and atmospheric precipitation);
- hr(A)-HF – black, for indoors and outdoors operation (if protected against solar radiation and atmospheric precipitation).

Armor: made of steel zinc-plated wires.

Main Features:

- non-flame retardant in case of bunch laying;
- minimum bending radius – $10 \times D_H$, where D_H – outer cable size;
- flexible, with multi-wire strand;
- shielded;
- armored.

RS-485 interface armor cable with a protective hose

NEW

Cable view in a cross section

Scope of application:

- for data collection and transmission systems, applying RS-485 industrial interface, according to standards ISO/IEC 8482, TIA/EIA RS-485-A;
- flexible cables are applied for laying in inaccessible places with a small bending radius;
- shielded cables are applied in buildings and structures with higher level of electromagnetic interference;
- shielded cables are protected against external mechanical impact, including by gnawing animals;
can be laid in soil of categories I-III.

Cables with hr(A)-LS index are applied in indoor electrical installations, production premises, enclosed cable structures, etc.

Cables with hr(A)-HF index are laid in multifunctional buildings, building complexes and structures with mass presence of people, etc.

Construction features

Conductor:

- multi-wire copper tinned strands 0.6 mm (7×0.20 mm) diameter;
- multi-wire copper tinned strands 0.78 mm (7×0.26 mm) diameter.

Insulation:

- solid polyethylene (PE);
- foamed polyethylene.

Shield: aluminum-lavsan tape with contact conductor and braiding made of copper tinned wires.

Shell and protective hose (on top of armor):

- hr(A)-LS – flexible PVC compound with low smoke and gas release;
- hr(A)-HF – halogen-free polymer compound (LSZH).

Shell color:

- hr(A)-LS – grey, for indoors and outdoors operation (if protected against solar radiation and atmospheric precipitation);
- hr(A)-HF – black, for laying indoors and outdoors (open air, protection against ultra-violet).

Armor: made of steel zinc-plated wires.

Main Features:

Interface fire resistant cable ITK RS-485

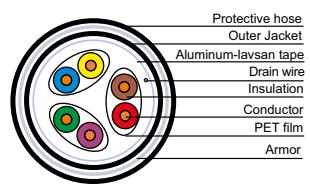

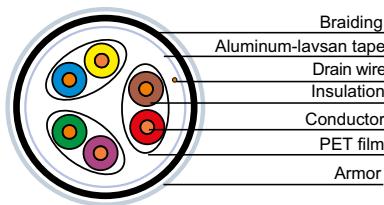

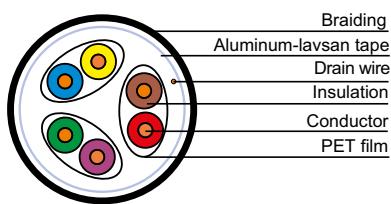

Made
in Russia

Fire-resistant pair twisting cables are designed for transmission of digital and analog signals in civil and industry security systems, fire protection and industry automation systems, related to human life support on high fire risk locations (oil and gas plants, chemical and metallurgical plants, mines, underground railway, water crafts, etc.). Also can be applied in other communication, control and management systems, that must remain functional during 180 minutes in open flame conditions. Can be used in systems, using a standard RS-485 and Profibus.

Interface fire resistant cable RS-485

NEW**shielded****armored****armored with protective hose**

Cable view in a cross section

Scope of application:

- for industry security and automation systems;
- for fire protection systems;
- on high fire risk locations (oil and gas plants, chemical and metallurgical plants, underground railway, etc.);
- for other systems, that must remain functional during 180 minutes in open flame conditions;
- shielded cables are applied in buildings and structures with higher level of electromagnetic interference;
- shielded cables are protected against external mechanical impact, including by gnawing animals; can be laid in soil of categories I-III.

Cables with hr(A)-FRLS index are applied in indoor electrical installations, production premises, enclosed cable structures, etc.

Cables with hr(A)-FRHF index are laid in multifunctional buildings, building complexes and structures with mass presence of people, etc.

Construction features

Conductor: single-wire copper strands with diameter from 0.64 to 1.78 mm.

Insulation: fire-resistant silicone resin.

Shield: aluminum-lavsan tape with contact conductor.

Shell and protective hose (on top of armor):

- hr(A)-FRLS – flexible PVC compound with low smoke and gas release;
- hr(A)-FRHF – halogen-free compound.

Armor: made of steel zinc-plated wires.

Shell color:

orange, for indoors and outdoors operation (if protected against solar radiation and atmospheric precipitation).

Main Features:

- fire-proof, flame retardant (FE 180);
- minimum bending – 8xD_h, armored and with protective hose – 12xD_h, where D_h is an outer cable size;
- shielded (option);
- armored, with additional protective hose (option).

ITK

Fire-resistant ITK cable for fire protection systems

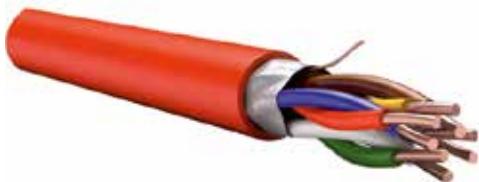

Cables are designed for bunched wiring in fire fighting systems, fire alarm systems, access monitoring and control systems (AMCS), fire alarm and evacuation systems, emergency lighting systems on evacuation routes, emergency ventilation and smoke control systems, automatic fire suppression systems, as well as in other communication, control and management systems, that must remain functional during 180 minutes in open flame conditions.

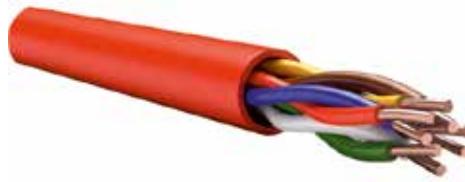

Fire-resistant ITK cable for fire protection systems, shielded and unshielded

NEW

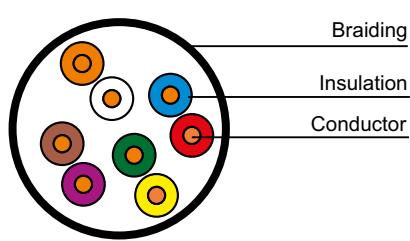

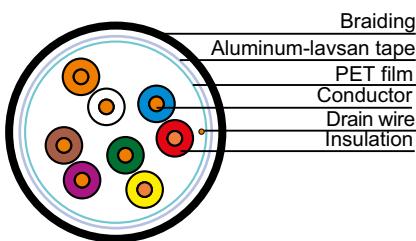

shielded

unshielded cable

Cable view in a cross section

Scope of application:

- fire alarm systems;
- fire alarm and evacuation systems;
- access control and management systems;
- other systems, that must remain functional during 180 minutes in open flame conditions;
- shielded cables are applied in buildings and structures with higher level of electromagnetic interference.

Cables with hr(A)-FRLS index are applied in indoor electrical installations, production premises, enclosed cable structures, etc.

Cables with hr(A)-FRLSLTx index are applied in children pre-school and educational institutions, specialized nursing homes for elderly and disabled people, in hospitals, bedroom buildings of residential establishments, in children institutions and other social facilities, according to FZ No. 123, with fire risk classes according to F1-F3.

Cables with hr(A)-FRHF index are laid in multi-functional high-rise buildings, complexes and structures with mass presence of people, etc.

Construction features

Conductor: single-wire copper strands with section from 0.2 to 2.5 mm².

Insulation: fire-resistant silicone resin.

Shield: aluminum-lavsan tape with contact conductor.

Shell:

- hr(A)-FRLS – flexible PVC compound with low smoke and gas release.
- hr(A)-FRLSLTx – low-toxic flexible PVC compound with low smoke and gas release;
- hr(A)-FRHF – halogen-free polymer compound.

Shell color:

- hr(A)-FRLS , hr(A)-FRHF – orange;
- hr(A)-FRLSLTx – red.

Main Features:

- fire-proof, flame retardant (FE 180);
- minimum bending radius – $10 \times D_H$, where D_H – outer cable size;
- shielded (option);
- cables with indexes hr(A)-FRLS , hr(A)-FRHF , hr(A)-FRLSLTx for indoors and outdoors operation, if protected against direct solar radiation and atmospheric precipitation.

Tools

- Cable stripping and cutting
- Cable crimping
- Impact tool
- Cable testers
- Mounting accessories

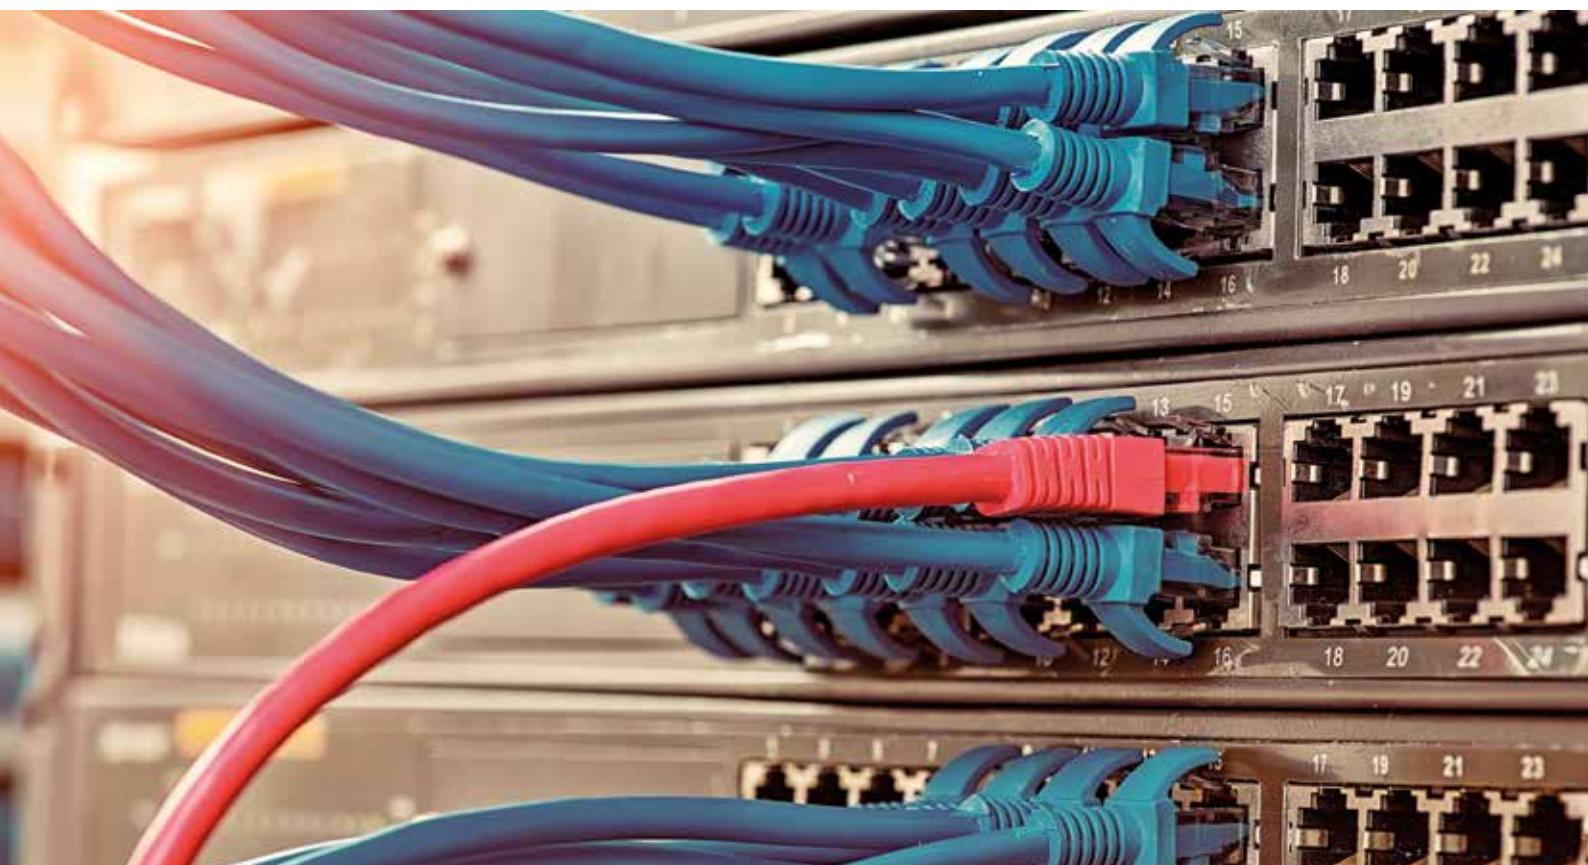

Organization of structured cable systems and cable operations required a high quality professional hand tools of various application, whether cable stripping or cutting or termination into a patch panel.

In order to reduce time for SCS mounting, ITK produces professional tools of wide application range: for operation with telephone, LAN and coaxial cable.

SCS copper components

- Usage versatility as part of SCS systems
- Broad range with an option to select a mounting type
- Gold sputtering of a terminal block
- Compliance with international standards

Range of copper ITK® copper components is a comprehensive solution, allowing to build a physical infrastructure of any complexity. A mature system is reliably protected against internal and external crosstalk and operates on frequencies up to 500 MHz.

All products undergo 100 % quality control on production stage, as well as additional control on stages of storage and transportation.

A 25 years system warranty covers copper components (except for low-cost families).

High density patch panels.

Cutting edge solution with sustainable data transmission, convenient arrangement of ports, compact form-factor and small weight, with efficient switching of mounting space allows to build a required port configuration for various design tasks utilized in data centers and in high density cable systems.

Compatible with Keystone Jack modules without tool termination (Toolless) and modules IDC 110 ITK®, except for socket modules CS1-1C5EF-11, CS1-1C06F-11

Patch cords

Patch cords are designed to connect information transmission lines between different sections of switch panels, to connect active switch or server equipment to a network, as well as to connect telephones and computers to information sockets. Major properties of the cords include resiliency to repeated stress due to bending and torsion, which is ensured by multi-wire conductor. Produced in different outer jacket types, shielded and unshielded. For convenient mounting, reduced errors during termination and line switching in distribution devices, as well as for cable line separation depending on scope of application, ITK® offers patch cords in various color versions.

Article designation system for patch cords

PC01-C5EU(L)-1M

PC patch cord

01 cable color:

01 – grey, 02 – green, 03 – blue,
04 – red, 05 – yellow, 06 – violet,
07 – orange, 08 – white, 09 – black

C5E patch cord category according to ISO/IEC 11801:2002 and TIA/EIA-568-B:

C5E – category 5E,

C6(C06) – category 6,

C6A – category 6A,

C3 – category 3

U shield availability:

U – UTP (unshielded),

F – F/UTP (foil shielded),

S – S/FTP (each pair is shielded by metal wire and foil)

(L) outer jacket type:

L – if there is LSZH outer jacket, PVC outer jacket by default

1M patch cord length

05M – 0,5 meter, 1M – 1 meter, 2M – 2 meters, etc.

Patch cords

Construction with protection against hitching on cable

Color differentiation of services and user groups

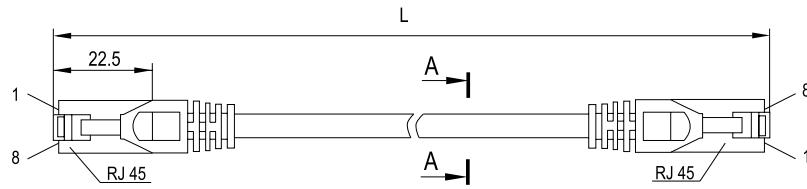

Protective shield versions

Sockets, adapters and Keystone Jack models

Information sockets are used to connect terminal user equipment at workplaces to computer or telephone network. In terms of construction, ITK® sockets consist of plastic front panel, hosting jacks for connection of patch cords and Keystone Jack modules. Modules on the jack side of a socket have contacts, to which a patch cord is connected, and from the other side they are fitted with IDC module, allowing to reliably mount the network cable by cutting the insulation. Adapters and couplers are used to extend, upgrade and separate the cable line. All sockets, adapters, modular inserts and front panels of ITK® meet international quality standards, ensuring their compatibility with components for SCS and cables by other manufacturers. They are made of high quality non-flammable materials and offer reliability and great user experience.

**Advantages**

Modern appealing design

Stable data transmission

Wide range of mounting

Building a system of any category

Specifications

* Except for modular patch panels

Keystone Jack modules

Solutions
for all categories
of SCS

Various color
versions

Label platform
for IDC contacts

Advantages

Modern appealing design

Building a system of any category

Color versions for distinction of installation
operating zones

Versatile solution for mounting
into socket enclosures and patch panels

Specifications

- Module type UTP
- Category 6A, 6, 5E
- Mounting type into a modular insert
into a modular patch panel,
into a socket board
- Module termination type Vertical 90°
- Termination type of IDC contacts 110
- Material of IDC contacts bronze
- Sputtering on module contacts gold 3 µ
- Permissible diameter
of conductors 22–24 AWG
- Amperage max. 1.5 A
- Rated working voltage 48 V
- Termination resistance 20 MΩ
- Insulation resistance 500 MΩ
- Q-ty of cord ≥ 750 connection cycles

full compatibility													
module construction allows to install it into board patch panels, whether shielded or unshielded													
the module cannot be installed closely to each other for complete filling of a board patch panel													

ITK

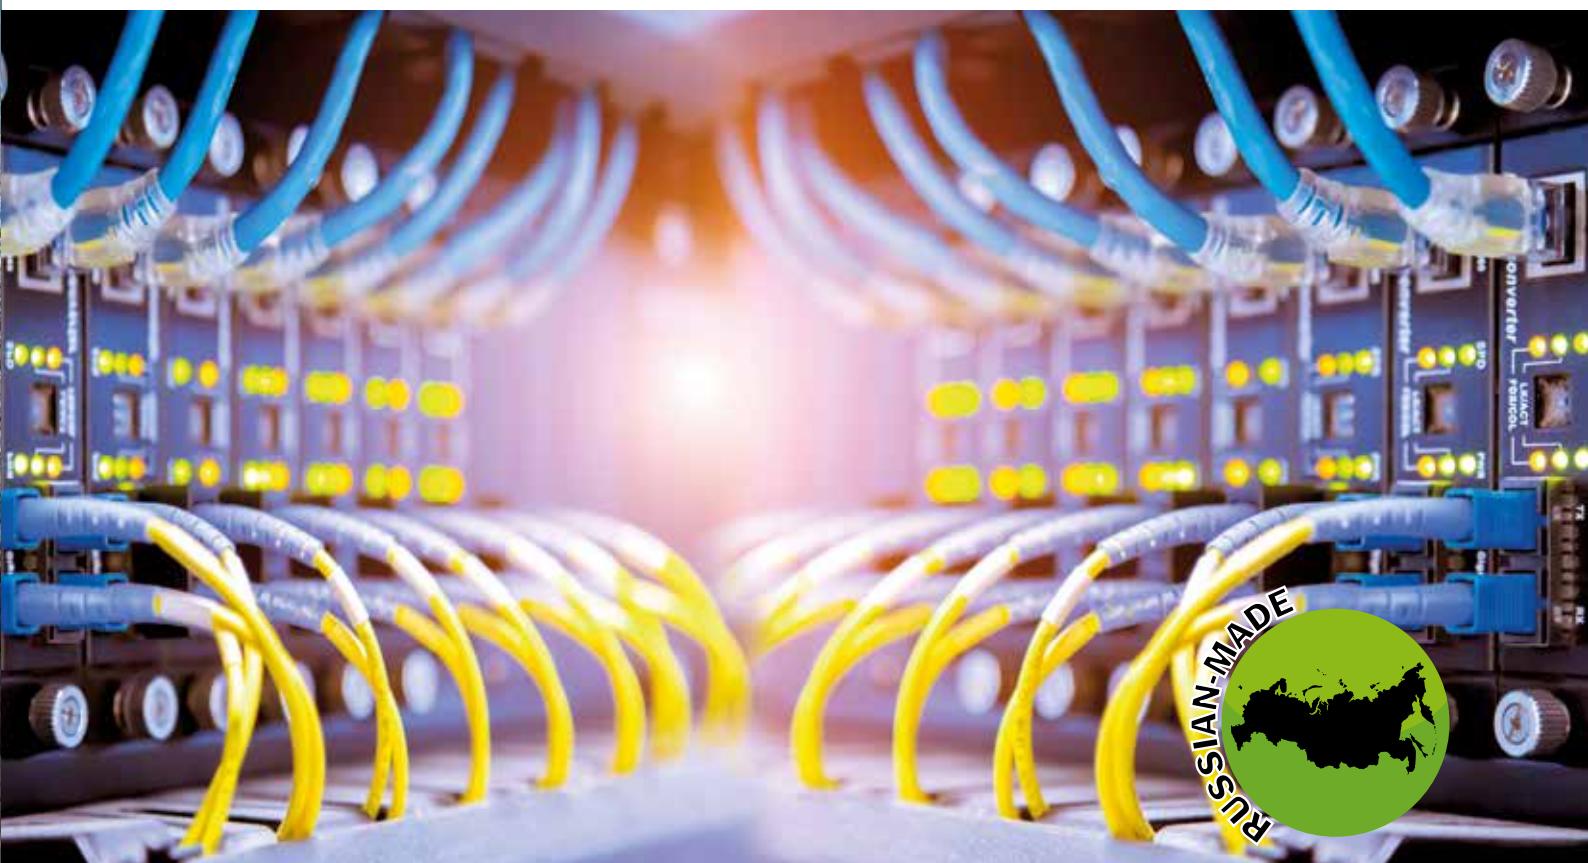

MORE THAN 25 YEARS
OF RELIABILITY

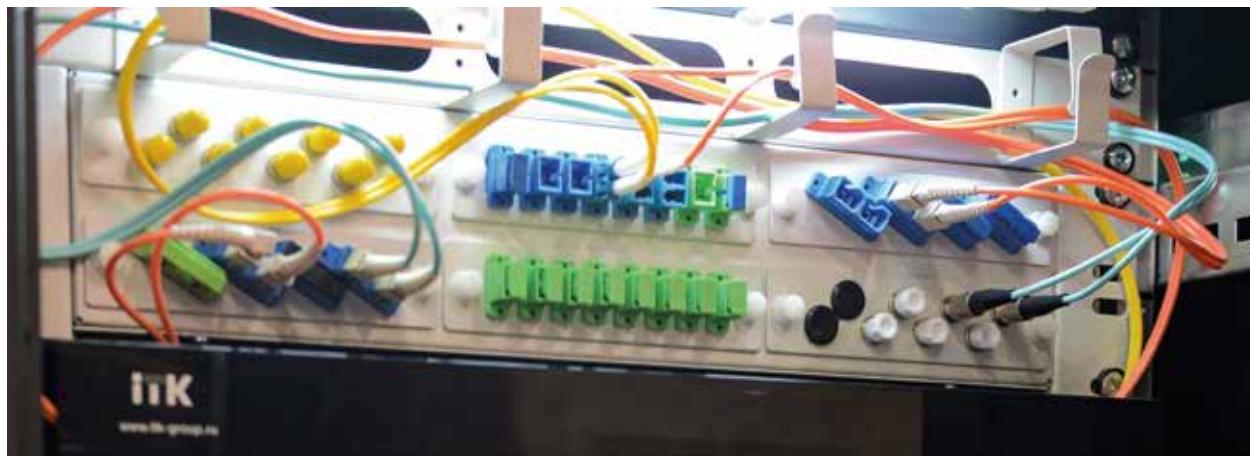

SCS optical components

- Compatibility with SCS components
- Stable data transmission
- Broad scope of application
- High quality materials

ITK® optical components are used to build modern systems,
switch optical signals of communication trunk lines and distribute
these signals to small optical networks

Optical distribution frames 19"

All types of optical cords
for switching

Broad range of adapters
for connection

Convenient protective plugs
for unused ports

Accessories for optical distribution frames

	Name	Application	Article
	Panel for 8 optical adapters (FC or ST in 19" frame)	For FC or ST adapters in 19" frame	FOBX-P8-FX
	Panel for 8 optical adapters SC or LC (Duplex) in 19" frame	For Simplex or LC (Duplex) adapters in 19" frame	FOBX-P8-SC
	Panel for 4 optical adapters SC (Duplex) in 19" frame	for SC (Duplex) adapters in 19" frame	FOBX-P8-SCDX
	Plug in 19" optical distribution frame	Unused holes of frames are closed with plugs	FOBX-P8-Z
	Plug FC or ST plastic (black)		FOBX-Z-FC
	Plug SC or LC (Duplex) plastic (black)	Plug is used to close unused holes in panels	FOBX-Z-SC
	Plug SC (Duplex) plastic (black)		FOBX-Z-SCDX
	Optical fiber organizer for 32 SCPs	Designed to lay excessive optic fiber	FOSK-32
	Cover for an optical fiber organizer	Several optical fiber organizer can be installed, but only one cover is required	FOSK-K
	Kit for welding protection, 40 mm	Designed to protect the connections during optic fiber welding	FOKDZS-40
	Kit for welding protection, 60 mm	Designed to protect the connections during optic fiber welding	FOKDZS-60

Optical distribution frames 19"

Advantages	Specifications
Convenient mounting and reliable operation	<ul style="list-style-type: none"> Height 1U, 2U Width 41 cm (with brackets – 48 cm) Depth 22.5 cm (with brackets – 27.5 cm) Q-ty of ports up to 24, 48 Mounting type for 19" profile Enclosure material sheet steel 1.2 mm Color grey (RAL 7035)
Compliance with international standards	
Wide range of mounting	
Up-to-date coating of a panel enclosure with increased service life	

Product range

Name	Height	Q-ty of ports	Article
1U Optical distribution frame up to 24 ports (with no planes, 8 ports each – 3 pcs.)	1U	Up to 24	FOBX24-1U-000
2U Optical distribution frame up to 48 ports (with no planes, 8 ports each – 6 pcs.)	2U	Up to 48	FOBX48-2U-000

Complete optical distribution frames and boxes

For convenience, optical distribution frames are delivered in a set with all required components.

The delivery set includes: optical adapters, planes to install optical adapters, plugs for free slots in planes and in a frame, optic fiber organizers, required quantity of pig tails, a pig tail labeling kit and a kit for welding protection.

The kit contains all necessary fastenings, optical boxes, that are installed into 19" cabinets and racks, include "eyelets" for fastening, wall-mount optical boxes also include a lock and keys to close the frame. Also the frame set includes stickers — "Beware: laser" and "Grounding".

Range of complete frames for mounting into 19" rack with SC adapters

Optical adapters

Optical adapters are designed to switch optical patch cords and pig tails. Optical adapters are installed in panels in optic frames, ensuring reliable connection for signal transmission. Optical adapters differ by connection type (ST, SC, FC, LC) and polishing type (UPC and APC). Also optical adapters come in a single or a dual version (Simplex and Duplex).

Specifications

• Adapter type	SC	FC	LC	ST
• Polishing	APC, UPC	UPC	APC, UPC	UPC
• Version	Simplex, Duplex	Simplex	Simplex, Duplex	Simplex
• Color	green, blue	silver	green, blue	silver
• Material	plastic	metal	plastic	metal
• Spigot material	ceramic	ceramic	ceramic	ceramic
• Service life, activations	500	500	500	500
• Insertion attenuation, dB	0.2	0.2	0.2	0.2
• Insertion attenuation at the end of service life	no more than 0.27 dB			
• Temperature ranges, °C	-40...+75	-40...+75	-40...+75	-40...+75

Optical sockets, connectors and Keystone Jack modules

Optical sockets and modules allow to establish connection in premises of an end user/subscriber (apartment, office, summer house, etc.) using various types of optic fiber. Multimedia version allows to combine additional switching using a twisted pair.

Standard and multimedia versions of sockets

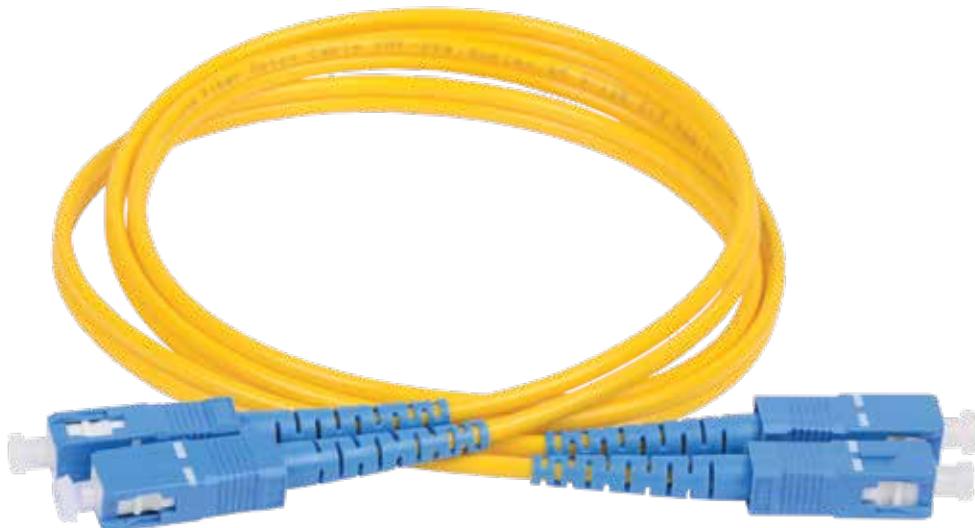

Product range

Name	Connector type	Polishing	Version	Article
Module Keystone Jack ST UPC (Simplex)	ST	UPC	Simplex	CS1-FSTU-1C
Module Keystone Jack SC UPC (Simplex)	SC	UPC	Simplex	CS1-FSCU-1C
Module Keystone Jack LC UPC (Duplex)	LC	UPC	Duplex	CS1-FLCU-2C
Wall-mounted optical socket 2 ports for SC/LC adapters	SC/LC	-	Simplex/Duplex	CS2-FSCLC-22
Multimedia socket, wall-mounted 2 ports for SC/LC adapters and 1 port for KJ module	SC/LC/ Keystone Jack	-	-	CS2-MSCLC-32
Box for multimedia and optical socket, wall-mounted	-	-	-	CS2-FMBB-02

Optical cords (patch cords, pig tails)

Optic communication lines are switched and connected to network and measurement equipment using optical patch cords. An optical patch cord is an optic fiber cable in LSZH outer jacket, terminated by an optic connector; if a cable is terminated only from the one side, this kind of a patch cord is called a pig tail.

ITK optical patch cords and pig tails are produced using high quality components, Corning's fiber, Ferrule Connectors by the Japanese company Adamant.

Increased quantity of ON/OFF cycles

Protective outer jacket LSZH

Reliable fixation of input cables

Stable data transmission

Optical mounting cords (pig tails) single-mode (SM) and multi-mode (MM)

Optical mounting cords (pig tails) are a section of a cable, terminated from one side with a connector, and the other end is connected with a fiber using welding. Mounting cord length – 1.5 m.

Product range

Optical connection cord (patch cord), multi-mode MM 50/125 (OM4)

Patch cords of this series are made of fiber with enhanced frequency properties — multi-mode fiber 50/125 (OM4), terminated from two sides with similar type of connector. This fiber allows to use these patch cords in data center structures.

Optical connection cord (patch cord), multi-mode MM 50/125 (OM3)

Patch cords of this series are made of fiber, supporting data transmission at 10 Gb/s bandwidth on a distance up to 550 m – multi-mode fiber 50/125 (OM3), terminated from two sides using similar kind of connectors.

Optical cross cord (patch cord), multi-mode MM 50/125 (OM3)

Patch cords of this series are made of fiber, supporting data transmission at 10 Gb/s bandwidth on a distance up to 550 m – multi-mode fiber 50/125 (OM3), terminated using different kinds of connectors.

Optical connection cord (patch cord), single-mode SM 9/125 (OS2)

Patch cords of this series are made of single-mode fiber G.652, terminated from two sides using similar kind of connectors.

Fiber-optic cable

This product is a cutting edge solution to implement projects, that are based on high speed data transmission, replacing systems with increased demands powered by a copper cable.

Cable designation structure

FOC XXXX-X-XX XX-XX-XX-XXXX	
	Cable length
	Shell type
	Cable construction
	Fiber quantity
	Laying method
	Cable type
	Fiber type
	Product type

Cable designation structure explanation

Name	Explanation
Product type	FOC - fiber optic cable
Fiber type	0902 - single mode 9/125 µm, OS2 6201 - multimode 62.5/125 µm, OM1 5002 - multimode 50/125 µm, OM2+ 5003 - multimode 50/125 µm, OM3 5004 - multimode 50/125 µm, OM4
Cable type	U - Universal S - Suspension
Based on gasket type	Universal cable: IO (In/Out) - indoor/outdoor; Trunk cable (OKPC-D2k): OU - outdoor
Fiber quantity	1-16
Cable construction	Universal cable FL (Flex) - flexible (OKMB-02) TD - thin and durable (OKMB-03) Trunk cable (OKPC-D2k) 10 - 1.0 kN 15 - 1.5 kN 30 - 3.0 kN - maximum tensile load rating
Shell type	Universal cable OKMB-02 (03) HF - нг(A)-HF - not flame retardant in case of bunched cabling, halogen-free LT- нг(A)-FRLSLTx - flame-proof, with low smoke and gas emission, low toxicity of combustion products (fire safety class P1b.1.2.1.2 according to GOST 31565-2012) Trunk cable (OKPC-D2k) PV - high density polyethylene
Cable length, m	200 500 1000 1200 1500 2000

Universal fiber optic cable OKMB-02 and OKMB-03 by ITK® is delivered in outer jackets made of polymer materials with low fire risk:

- нг(A)-HF - not flame retardant in case of bunched cabling, halogen-free,
- нг(A)-FRLSLTx - flame-proof, with low smoke and gas emission, low toxicity of combustion products (fire safety class P1b.1.2.1.2 according to GOST 31565-2012).

Cables in an outer jacket нг(A)-FRLSLTx are applied in fire protection systems, as well as in other systems, that must remain functional in fire conditions. They are used in residential and public buildings, kindergartens, medical and administrative institutions, including multifunctional high-rise buildings, in technical premises, electrical installations and in conditions, where it is required to ensure fire safety and protection of people and equipment against toxic and corrosion gases.

Electric power distribution and monitoring

- Horizontal power distribution units (PDU)
- Vertical power distribution units (PDU)
- ADMIN series power distribution units with a monitoring function
- CONTROL series power distribution units with a monitoring and control function
- Power cables for PDU

To provide active network and server equipment with high quality electric power, ITC produces a wide range of PDU (Power Distribution Unit) sockets for horizontal and vertical mounting into a cabinet.

LED switch

Overvoltage protection

Models with or without a power cable

IEC320 C13 sockets

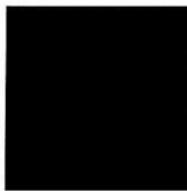

SCHUKO sockets

Removable fasteners

Explanation of designations for PH12-8D1-(P)

- PH** socket boards types
 PH – horizontal 19" PDU,
 PV – vertical PDU,
 PM – PDU with monitoring functions
 PC – connection cables for sockets
- 12** protection and add. functions
 11 – PDU with LED switch and a breaker,
 12 – PDU with LED switch without a breaker,
 21 – PDU without LED switch and with a breaker,
 22 – PDU without LED switch and without a breaker,
 13 – PDU with LED switch and overvoltage protection
- 8** quantity of sockets for equipment connection
 6 – 6 sockets,
 7 – 7 sockets,
 16 – 16 sockets, etc.
- D** Socket type
 D – SCHUKO standard sockets,
 C13 – IEC320 C13 standard sockets,
 DC13 – sockets of two standards – C13 and SCHUKO,
- 1** power cord and electric plug type
 1 – power cord with a SCHUKO electric plug,
 2 – power cord with a C14 electric plug,
 3 – no power cord, power is fed through C14 connector
- (P)** enclosure is made of PVC, if any

19" PDU socket boards

Horizontal 19" PDUs by ITK show high performance at providing electricity to network equipment in cabinets and racks, as well as meet requirements on protection against short circuit and overvoltage. Socket boards are made of high quality heat-resisting materials and plastics; depending on a model they are fitted with an LED switch, circuit breaker, reset button in case of overvoltage and meet Russian and international quality standards. Horizontal PDU meed 19" (482.6 mm) standard and are installed into 19" profile using brackets; position of brackets can be changed.

PDU with SCHUKO and IEC320 C13 sockets with a power cord

Specifications

• Dimensions, mm	482.6×44×44	• Power cord	2 m section 3×1.5 mm ²
• Socket type	SCHUKO, C13	• Features	construction fixation
• Q-ty of sockets	6, 7, 8, 9	brackets	regulated
• Unit type	for 19" profile	• Color	black
• Add. functions	LED switch	• Amperage	max. 16 A
	Overvoltage protection	• Voltage	230 V
• Enclosure material	thermoplastics, PVC, aluminum profile	• Load power	2200/3500 W
• Electric plug	SCHUKO	• Frequency	50/60 Hz
		• Packaging	Cardboard box

Vertical power distribution units (PDU)

NEW

Vertical combined and single-type 19" PDU by ITK allow to connect various equipment.

PDUs by ITK are made of high quality heat resisting materials and plastics and are fitted with 3 m power cable with IEC60309 electric plug.

PDUs by ITK show high performance at providing electricity to network equipment in cabinets and racks, as well as meet requirements on protection against short circuit and overvoltage.

PDUs by ITK meet Russian and international quality standards, as well as 19" standard (482.6 mm) and can be installed into 19" profile using a bracket; position of brackets can be changed.

with single type sockets

with combined sockets

Explanation of designations for PV22-20C13-06C19-41

Item No.	Description	Possible options
1	PV – product name	PV – vertical PDU
2	2 – LED switch	1 – available 2 – no
3	2 – breaker	1 – available 2 – no 3 – with not breaker, with overvoltage protection
4	20 – q-ty of sockets	08 – 8 sockets 07 – 7 sockets 06 – 6 sockets 16 – 16 sockets
5	20C13-06C19 – type and quantity of sockets (3rd or 3rd, 4th and 5th (if applicable))	D – socket DIN49440 (Schuko) 2C13 – socket C13 IEC 320, 2 pcs. 13C13-04C19 (min. 2 types, specified with a hyphen)
6	4 – power cord and a type of electric plug (the last symbol in the second set)	1 – power cord with an electric plug DIN49440 2 – power cord with an electric plug C13 3 – no power cord, power is fed through C14 connector 4 – power cord with an electric plug IEC60309 (industry) 5 – no power cord, power is fed through DIN connector 6 – no power cord, power is fed through a terminal strip
7	1 – q-ty of phases	1 – 1 phase 3 – 3 phases
8	P – production material	P – PVC, enclosure is made of PVC, if any

ADMIN power distribution units (PDU) with a monitoring function

NEW

Power distribution units (PDU) with a general monitoring function are designed to meet operational requirements of new generation data centers. ADMIN PDUs by ITK provide reliable distribution and measurement of power on PDU level, as well as maintain sensors monitoring the environment.

ADMIN PDU by ITK is a resilient, upgradable and maintained PDU system, that can be reconfigured or updated without a shutdown, without affecting the operation of the data center.

Built-in hydraulic circuit
breakers

A patented system preventing from accidental unplugging or contact
loosening

Connection of sensors
to control temperature,
humidity, access control,
smoke and flooding

Large LCD with an option to
rotate a screen by 180°

Replacement modules of
output connectors

Tool-less PDU fastening

Power cables for PDU

ITK produces and delivers a broad range of power cables for PDU with electric plugs of standards C13-C14, C13-SCHUKO, C19-C20. All cables for ITK® socket boards are regularly tested for quality on production site and meet international and Russian standards.

Cable carrier systems IEK®

- Metal cable carrier systems
- Plastic cable carrier systems

Due to up-to-date requirements to building communication networks and SCS it is necessary to use system, simplifying mounting and installation. Cable carrier system provide high reliability, convenient and quick installation of cable tracks, as well as adequate resiliency to load. Various types of galvanized metal trays, plastic boxes, as well ad different accessories allow to execute installation of any complexity and configuration. Quality of our systems coupled with ease of use is complemented by clear cost advantage of the Russian manufacturer.

Metal sheet cable trays and accessories ESCA

The ESCA system of metal sheet cable trays and accessories is designed to organize cable routes at residential and commercial construction and industrial sites, including outdoor installation using special accessories. ESCA cable trays are made of high-quality Russian zinc-coated steel for various climatic modifications and placement categories in accordance with GOST 15150, which ensures a high degree of reliability and safety at facilities throughout the long service life of products.

Advantages

- Open method of cable tracks laying using metal trays allows to easily maintain electric and low-current system and develop it.
- A special lock gives additional mechanical strength to the tray, protects the cable from damage and ensures fast and reliable installation of the cover.
- Telescopic joint "male-female" accelerates mounting
- Double ground loop via a cable tray and a cover
- A range of typical sizes of trays and accessories allows to design a cable track of any complexity.

Specifications

- | | |
|------------------------|---|
| • Height | 35–100 mm |
| • Width | 50–600 mm |
| • Thickness | 0.55–2.0 mm |
| • Coating | galvanized steel, hot zinc |
| • Scope of application | outdoors and indoors
of production, trading,
office and residential buildings |

LESTA ladder trays and accessories

The new patented line of LESTA metal ladders allows you to organize a reliable installation of cable routes at industrial, commercial and civil construction sites with high requirements for load and corrosion resistance. High Safe Working Load (SWL) ratings allow to use LESTA ladder trays at sites of significant importance, and a wide range of accessories allows you to design and install a cable route of any complexity.

LEST ladder trays are made of coiled cold rolled steel, pre-galvanized by Sendzimir process (GOST 14918-2020).

Advantages

- High bearing capacity of ladder trays allows to lay heavy cable lines with a load more than 600 kg/m.
- Open method of cable lines laying using metal ladders trays allows to easily maintain electric and low-current system and develop it.
- Universal “male-female” connector allows to mount cable tracks both longitudinally end-to-end, and in an overlapping manner from the side due to a new symmetric design.
- Unique patented construction remarkably improves durability of LESTA IEK ladder trays.
- A range of typical sizes of trays and accessories allows to design a cable track of any complexity, when different types of trays are used.

- Length 3000–6000 mm
- Thickness 1.0*1.2*1.5 mm
- Material galvanized steel using Sendzimir process (zinc-plated coating mass up to 200 g/m²)
- Warranty protection against deep corrosion up to 10 years if operation conditions are met
- Scope of application outdoors and indoors of production, trading, office and residential buildings

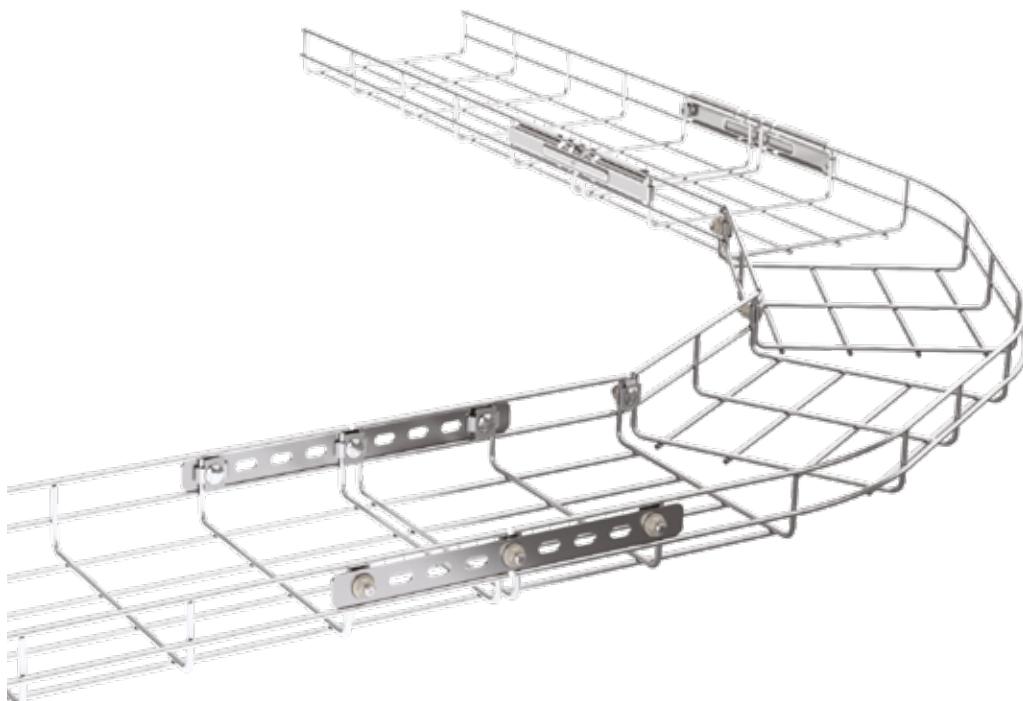

Specifications

- | | |
|----------|------------|
| • Height | 55–150 mm |
| • Width | 200–600 mm |

Galvanized wire trays and accessories

Wire trays are designed for installation of power and information cables inside buildings and structures. Most often used under false ceilings.

A distinctive feature of cable installation in wire trays is ease a minimum number of accessories usage, as well as excellent ventilation of the laid cable route, which reduces the possibility of overheating.

Advantages

- Maximum ventilation of the installed cable track.
- Wire trays system is installed using minimum quantity of accessories.
- Trays can be connected between each other without screws.
- Easy access to wiring during operation.
- Wide range of typical sizes of trays and accessories allows to solve even the most complicated mounting tasks.

Specifications

- | | |
|------------------------|---|
| • Height | 35–100 mm |
| • Width | 60–600 mm |
| • Length | 3,000 mm |
| • Thickness | 3.8–4.8 mm |
| • Material | article 1 – galvanized steel using Sendzimir process;
article 2 – hot-dip galvanizing by dipping after manufacture;
article 3 – stainless steel AISI 304;
Артикул 4 – galvanically zinc-plated steel |
| • Coating warranty | 10 years if operation conditions are met |
| • Scope of application | for cable laying indoors |
| • Specifications | 707.00.00.000-2005 ИМ |

Installation products system for cable metal trays and accessories by IEK

The IEK® installation products system is used for all types of metal cable trays. It is also allowed to use the IEK® installation products system for laying cable routes and utilities without metal tray systems but with profiles, consoles and other mounting elements. The system elements are fully compatible with each other, which allows you to create structures of any complexity with only one bolted connection using a minimum number of special tools. The IEK® installation product system can be roughly divided into 3 types depending on the cable load:

1. System for light cable loads – consists of brackets based on the OMEGA profile.
2. System for medium cable loads – consists of U-shaped profiles of various thicknesses and compatible ceiling and wall brackets.
3. System for high cable loads – consists of STRUT-profiles of various thicknesses and sizes, ceiling hangers, consoles and accessories. A wide range of STRUT-system accessories allows you to mount support structures for cable routes of any configuration and complexity.

**SYSTEM FOR LIGHT
CABLE LOADS**

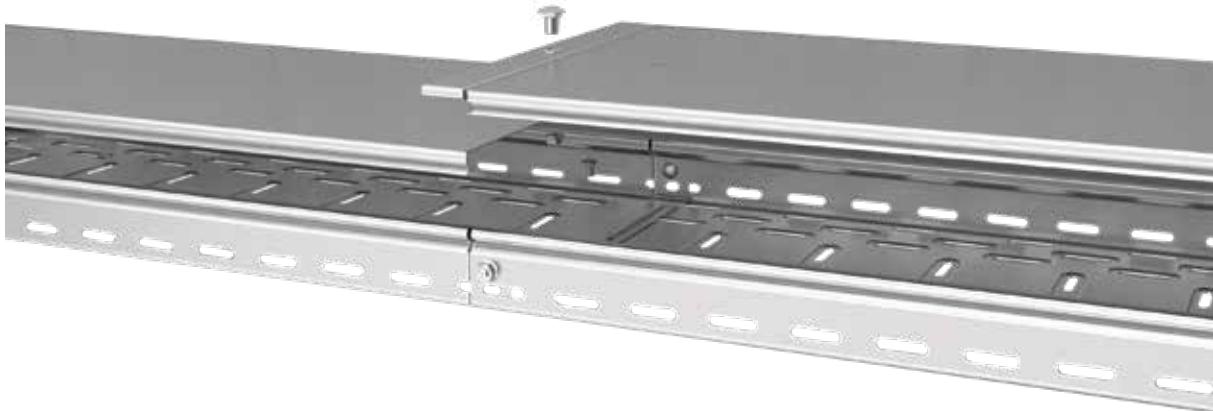

**SYSTEM FOR MEDIUM
CABLE LOADS**

**SYSTEM FOR HIGH
CABLE LOADS**

Metalware

Designed to mount metal trays (rolling, wire, ladder and other types) on building parts (ceiling, walls, floor), as well as to connect trays between each other.

Advantages

- Construction of metalware connections elements mostly ensures convenient and quick installation.

Specifications

- Material zinc-plated steel
- Color white
- Coating warranty protection against deep corrosion up to 10 years if operation conditions are met
- Scope of application outdoors and indoors of production, trading, office and residential buildings

PRIMER series cable ducts and accessories

PRIMER series system of parapet cable ducts is designed for installation of all types of power and low-voltage communications, including optical cable and information wiring of high categories, for organizing a workplace in office, industrial and administrative buildings, medical and educational institutions, during construction and reconstruction.

The PRIMER series cable duct system complies with the requirements of 27.33.14-004-83135016-2017.

Advantages

- Workplace arrangement.
- Ensuring electrical safety (additional insulation of electrical wiring)
- Protection of wiring from mechanical damage.
- Exclusion of a possible fire in case of a short circuit.
- Restriction of unauthorized access to wiring.
- Simplified electrical wiring in the construction and reconstruction of buildings.
- Providing quick access to electrical wiring in an emergency.
- Possibility of quick modernization and addition of electrical wiring.

Specifications

- Material self-extinguishing PVC
in case of fire the material doesn't let the fire propagate
category PV-0,
tests as per GOST R 53313
- Fire resistance min. 5 kgf/cm at
temperature – 32 °C;
- Strength –15...+60 °C
- Operating temperature range for continuous operation –15...+60 °C
- Installation temperature –25...+60 °C
- Storage & Transportation Temperature
- Electrical resistance At least 1 x 109 Ohm x cm
at + 20 °C
- Color white
- Cover removal test no additional tool is required
to open, unauthorized access
to current carrying parts
is restricted

Floor systems

ONFLOOR hatches are designed to organize work space in false floors, floors for concrete pouring, as well as directly at a workplace. Scope of application: business offices, social facilities, administrative premises.

Advantages

- Option of flush-mounting.
- Installation of wiring accessories 45'45, 45'22.5 и 60'60.
- High mechanical stability.
- Cable protection against kink.
- High fire resistance.

Specifications

- Material ABS-plastic
- Protection degree IP30
- Load characteristics, H 1500
- Application temperature, °C from -5 to +70
- Insulation voltage, Ui 500 V
- Resistance to abnormal heat and fire, °C 850
- Installation height, mm < 95
- Diameters of holes for duct entry 25, 32, 40
- Size of a hole for metal tray entry 150'35
- Service life, years 10

Corrugated pipes

Corrugated PVC pipes

Corrugated pipes are used for laying hidden-type power and low-current lines inside buildings and structures. Due to the flexibility of the pipe, cable laying is carried out with minimal effort and requires almost no additional accessories. Corrugated PVC pipes meet the requirements of 27.33.14-002-83135016-2017 technical specifications.

Advantages

- Exclusion of fire in case of short circuit.
- Additional protection of wiring from mechanical damage.
- The material of the pipes is an excellent dielectric.
- The flexibility of the pipes ensures quick and easy installation with a minimum of accessories.
- The convenience of pulling the cable is provided by the broach tool.

Specifications

- Material self-extinguishing PVC composition
- Protection degree IP40
- Strength, GOST 61386.1 above 320 N by 5 cm at +20°C
- Operating temperature range for continuous operation -15...+60 °C
- Installation temperature -10...+60 °C
- Storage and transportation temperature -25...+60 °C
- Electrical min. 100 MΩ (500 V for 1 min.)
- Fire resistance doesn't maintain fire
- Color grey

Corrugated HDPE pipes

Light type corrugated HDPE pipes (high density polyethylene) are designed to lay information power and low-current electric communication of a hidden (in conduits and screeds of floors) type in offices and residential premises, production and administrative buildings, medical and children institutions during building and reconstruction.

Corrugated HDPE pipes meet the requirements of 27.33.14-002-83135016-2017 technical specifications.

Advantages

- High flexibility and plasticity.
- The convenience of pulling the cable is provided by the broach tool.
- High resiliency to ultra-violet.
- Can be used for concreting.
- The material of the pipes is an excellent dielectric.

Specifications

- | | |
|--|---|
| • Material | HDP |
| • Protection degree | IP40 |
| • Climatic version | NF1 per GOST 15150 |
| • Operating temperature range for continuous operation | -40...+90°C |
| • Installation temperature | -40...+90°C |
| • Mechanical strength, GOST 61386.1 | light - above 125 N per 5 cm at +20°C;
heavy - above 320 N per 5 cm at +20°C |
| • Insulation resistance | min. 100 MΩ
(500 V for 1 min.) |

Electrical pipes

Technical smooth HDPE pipes

Designed for use in housing and communal services, power supply, telecommunications. Used in construction for concreting, for laying wires in screeds and in masonry, as well as laying underground utilities. Used to isolate and protect power cables, information and signal lines, communication lines from mechanical damage.

Advantages

- Durability (over 50 years) and high strength.
- IEK® technical smooth HDPE pipe combines the flexibility of a corrugated pipe with the smoothness of a rigid PVC pipe.
- Smooth surface simplifies cable pulling.

Specifications

- | | |
|----------------------------------|------------------------------|
| • Material | HDP |
| • Protection degree | IP40 |
| • Strength, GOST 61386.24 | 250 N |
| • Dielectric strength, | 2000 V minimum |
| • Insulation resistance, minimum | 100 MΩ
(500 V for 1 min.) |
| • Color | black |
| • Service life | 50 years |
| • Operation temperature | -40...+90 °C |

Double-walled HDPE pipes

Designed to protect power cables, information and signal lines, as well as communication lines from mechanical damage and aggressive environmental influences. Used in construction for installation underground utilities, in transport infrastructure during road construction, in housing and communal services, in electricity supply, telecommunications, and in some cases – for water sewerage.

Advantages

- Rigid pipes in sections 6 m., flexible pipes in coils 25-150 m
- Pipe length 6, 50, 100 and 150 m.
- The range includes pipes with outer diameter from 40 to 200 mm.
- Accessories – connection couplings included in a set.

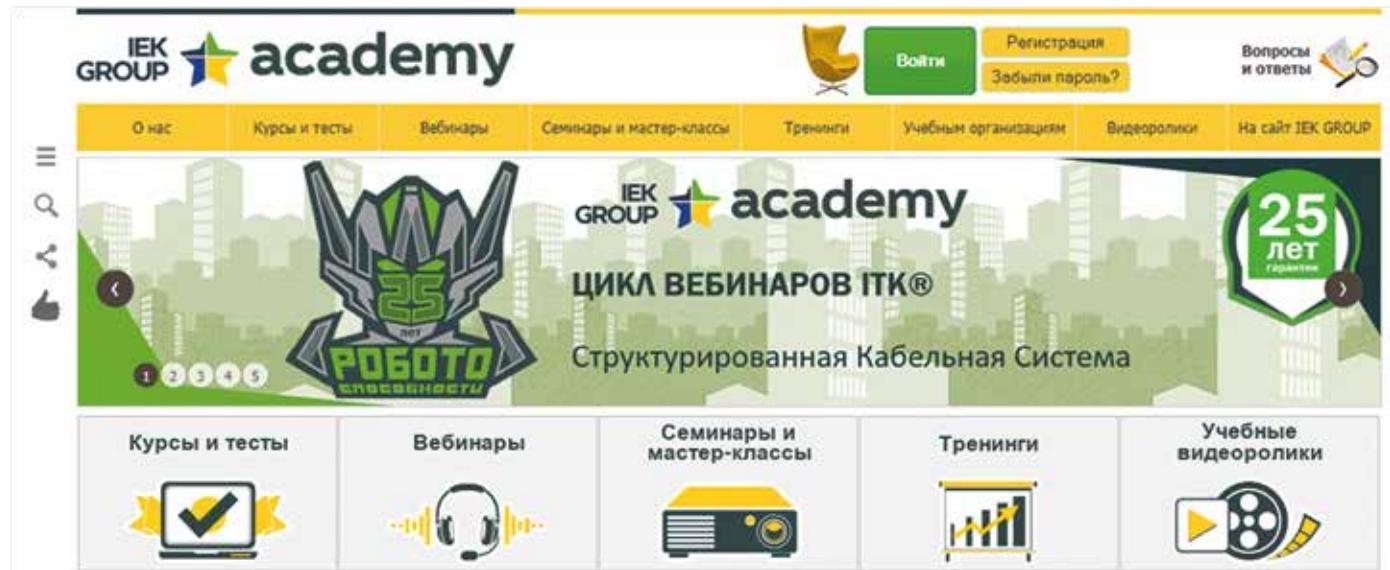

Specifications

- | | |
|---------------------------|---|
| • Material | HDP |
| • Protection degree | IP40 |
| • Strength, GOST 61386.24 | 750 N – flexible pipes,
1250 N – rigid pipes |
| • Dielectric strength, | 2000 V minimum |
| • Insulation resistance, | 100 MOhm |
| • Color | red |
| • Service life | 50 years |
